Posts about A Guide to Florida's Historic Architecture written by flahistravel.

The road is four-laned, with a wide median between the northbound and southbound parts. Just past them on the left is the Hardee County Courthouse. I like the solid architecture, but the brownish-grayness does make it a bit bland. The old County Jail is behind, now used for local government office space. Back the way you came and crossing US 17, the old city hall is on the left. Very nice condition, I must say. All along here is nice, since Wauchula participated in the Main Street Florida program. Which is, you know, a house and a few acres of land. Still, it is private property, so you might want to take telephoto shots from the street. But Mom was with me, and she encouraged me to get closer. I was like, "Mom, I could be trespassing and get into trouble. Yep, she was one in a billion. If you have a kayak or canoe, you can take a relaxing trip along the river. Mostly farmland along the way. So whatever the reasons for US 17 being so expansive, they end in Zolfo Springs. If you want to see one of the kitschy places that define Florida, though, go east on SR Then south on CR and west on CR Which was made from printing plates that were discarded by a local newspaper. And some extra in case you want to get souvenirs. The first mile or so is a dirt road, but not pot-hole or anything. Then follow the map link below to see the remnants of Pine Level itself.

When it comes to architecture, Iceland is something of an oddity in regards to its helter-skelter collage of different influences and design styles. These abodes were in essence timber houses, methodologically based upon the longhouse designs of Norway, Sweden, Denmark and the Scottish Isles, but adjusted to specific Icelandic conditions. The foundation of turf houses was usually one or more layers of rock, but with a wooden structural base. Where did Icelanders Come From? To this day, several turf houses have been preserved and kept for historical purposes, although most of these were the more lavish homes of wealthy farmers or priests. Still, the turf houses of old were essentially timber housesâ€”only coated, supported and isolated with turf and soil from the local environment. This marvel turned out to be corrugated ironâ€”and one needs only take a stroll down any old street in Iceland to notice it still embellishes an abundance of buildings, in a parade of different colours, all over the country. Invented in and brought to Iceland by British merchants in the s to trade for wool, corrugated iron is, around the world, considered quite the dull and lacklustre building material. Most often utilised solely for industrial purposesâ€”such as to build sheds, storages or barnsâ€”in Iceland, the material proved so ideal for the local weather that it got embraced by the nation as a whole, allowing it to develop aesthetically. Everything from official buildings and churches to small houses and lavish homes got the corrugated iron makeover, as it got painted in different colours and interwoven with wooden window frames or decorative bits of adornment. Throughout all of this, Iceland still had no architectural style of its own to speak of, let alone native architects to develop such an opus. Instead, foreign influences and a merger of different styles and methods were the status quo. The timber houses, whether coated in corrugated iron or not, were often wholly imported from Norway, or new ones built which were based on the imported designs. These Danish artists were the very best of their domain, providing the Icelandic nation with a welcome stepping stone into an architectural revolution of their own. Following are segments on four such 20th Century pillars of Icelandic architecture. Although not widely recognised locally, he is generally considered the first Icelandic architect in history. As an avid practitioner of Historicism, he had no all-encompassing trade-marks to speak of but would fuse together different architectural directions each time around. His most important legacy, however, would be the no-less-than twenty-five churches of his design that dot the Icelandic countrysideâ€”which is more than any other Icelandic architect ever produced over his or her lifetime.

Chapter 3 : Florida and the Caribbean Open Books Series (Trifold)
