

Chapter 1 : View Plastic Surgery Clinic - Nano Bimaxillary Osteotomy

This bar-code number lets you verify that you're getting exactly the right version or edition of a book. The digit and digit formats both work.

What is the Nano bimaxillary osteotomy? Through accurate planning, a delicate facial surgery can be performed safely without even the slightest error in bone rotation and movement. The result is a beautiful set of teeth and natural facial expression. Bone scalpel enhancing the accuracy and safety of surgery The bone scalpel is an ultrasonic device which cuts the bones by responding only to the bone tissues. It has less vibration within 0. Point 1 Pinpoint accuracy without even a small error of 1mm and 1 degree Bimaxillary osteotomy depends on the accurate planning and precise surgery without even a small error because it changes the entire facial skeleton by moving the upper and lower jaws. The precise surgery based on accurate planning with no error makes a natural look without the look a toothless person. From the functional aspect, dental occlusion can be accurately balanced with no stress on the jaw joints. Tip What is occlusal plane rotation? It refers to a technique which pushes in the upper and lower jaws by rotating the chin to move to the proper position. The lower jaw automatically goes up when the fractured upper jaw is rotated and pushed upwards while the lower jaw is pushed more inwards to make a slimmer face shape and a natural facial expression with beautiful dentition. The cooperation of the Dream Team of Facial Bones is crucial for the accurate planning and precise surgery without even an error of 1 mm and 1 degree. What is the Dream Team of Facial Bones? The Dream Team of Facial Bones is the distinct system of View Plastic Surgery Clinic where medical specialists in the plastic surgery department, dental clinic partner and anesthesiology department jointly plan and perform the surgery for safety and the best results. This further improves the occlusion and the function of the jaw joints, and achieves more ideal results from even an aesthetic perspective. If both the bimaxillary osteotomy and contouring surgery are required, the dental clinic partner and surgery department takes charge of their respective field to upgrade the professional expertise plastic of the surgery. In addition, the anesthesiologist participates from the planning stage to predict unexpected situations and thoroughly monitors the patient for a safe surgery. The thorough follow-up care by a dedicated facial bone caregiver helps with a faster recovery and beautiful results after the surgery. Although the bimaxillary osteotomy is a facial bone surgery, it is the soft tissue that catches the attention of the eyes. The plastic surgeon is responsible for the cosmetic plan, the dental clinic partner covers the wafer production, post-surgery orthodontics and tooth-function related area, and the anesthesiology department is in charge of the safety during the surgery. STEP 2 2 Precise surgery directly performed by medical specialists in each area Sometimes, if the patient has a lantern face, long face or an asymmetrical face, the left and right side of the face is still unbalanced or the lower jaw remains longer than normal even after the bimaxillary osteotomy. For this reason, bimaxillary osteotomy and facial contouring surgery are performed together in many cases. The medical specialists in each field enhanced the specific professional expertise of their area by personally performing their respective procedure for the bimaxillary osteotomy. STEP 3 3 Program for dedicated care of facial bones View Plastic Surgery Clinic has organized a team dedicated to taking care of facial bones to provide customized care like massage, ultrasound and IR treatment programs. The systematic and thorough follow-up care minimizes swelling, helps the quick recovery and influences the surgery results. What is different about the 4th generation surgery?
