Could it be the best DSLR camera for beginners? The cards have well and truly been laid out on the table and for all to gaze at this 18 megapixel newbie. Find out exactly why travellers and those on the go love this camera. Canon EOS D review of the main features Canon have been brave enough to make a large statement claiming the fact that they have produced the goods when it comes to light and agile cameras. Canon have produced what we would like to call, one of the most effective and powerful Auto settings found on a DSLR of its price. Extra Effect Shot This one is for the creatives out there. Get your creative juices flowing and start experimenting with the clever and easy to use filters found on the EOS D. Canon have installed a really helpful and handy feature called Extra Effect Shot. This allows you to capture a filtered version of your shot, whilst also saving an unfiltered version. We found this particularly useful when shooting objects on the move. As with most products, the lighter something is, the more expensive it will be. However, Canon have out done themselves with the D. Weighing in at an impressive grams, the EOS D is the full package. Particularly popular with bloggers on the move wishing to capture the best images for their website. Due to its extreme weight or lack of the D may be the best camera for travel. Budding Beginner Photographers At the start of your photography journey? What we find useful is the Video Snapshot mode to capture edited movie sequences in-camera. Perfect for beginners but packed with a full range of features even the most experienced photographers would be proud of. One of the cheapest DSLR camera choices for beginners. Having said that, the modern features found on the D more than make up for this, enabling you to produce high quality, creative photos. But because of its unique size and weight and the Canon EOS D price, it has to be the camera of choice for those on the go. The 3 inch LCD touch screen Canon have added to the D ensures you can hop between settings quickly and easily. When compared to its competitors of similar price such as the EOS D the D produces very similar photos but noticeably better video footage.

Finally, we round things up with a selection of cool ways that you can customise your camera. So, what are you waiting for? Read on to discover the 75 best-ever Canon photography tips, tricks and techniques This will delete all the images and data, including protected images, so make sure you transfer everything to your computer before doing so. By default the AF system will be set to Automatic Selection and all points will be active. The camera will lock onto whatever is closest to you, and this may not be the subject. So take control and manually select an AF point by scrolling through them with Main dial. But do note that the brighter the display, the quicker the battery will be depleted. Once focus is achieved this light will remain on. Treat the number of possible shots per charge listed in the camera manual with a pinch of salt. There are many variables that exhaust batteries faster. Live View is a big drain, but so too are excessive image playback, continuous autofocus and image stabilization. Switch off the camera and, before you remove the lens, make sure its replacement is to hand. You simply aim at your scene or subject, press the shutter button halfway for an AF point to achieve focus, then fully press the button to take the shot. The flash might pop up if lighting conditions are low. It sets a high ISO setting and suitable shutter speed in order to prevent camera shake. It takes three shots at three exposures and combines them to improve shadow and highlight detail. Use this handy mode. Your camera may activate the pop-up flash, or suggest you use a tripod if it determines the exposure will be slow. Press the Q button, then on the rear LCD you can use the dial to change the depth of field for more or less background blur. To do this, your camera will often need to set a high ISO, especially in low light, and this could be as high as ISO It will capture vivid blues and greens and sharp images suited to landscape shots, but will only record a JPEG image.

Cameras with built-in Wi-Fi connectivity are all the rage today, but not necessarily the most intuitive feature to unlock. Luckily, Canon seems to have listened to 6D owners, and increased the ease of use of their Wi-Fi platform by switching up the free mobile phone app that comes with the 6D. This is a visual tutorial on how the new app works. Check for compatibility and download the app Currently, Canon Camera Connect is a free app available for download on Android and iOS devices. You can check full compatibility specs here. Enable the Wi-Fi function on your camera This step will likely vary depending on your model of camera. For the Canon 6D, this is a somewhat complicated process that merits its own tutorial, but the methodology can be summarized as such: Explore the interface of the Canon Camera Connect App After you have successfully connected your phone to your camera, the app should launch, and show you the opening screen, as seen below. You will most likely stick to the top two options, which are described in more detail below. Images on camera Pressing this will show you a gallery of all of the images on your connected camera, sorted by the date they were taken. To zoom in to any image, simply tap it with your finger. Three options will then appear at the bottom of the image: Save to phone, favorite star , or trash. All the controls can be adjusted and activated using touch screen control. There are a few shortcomings to the remote control settings as listed below, but off the bat the app provides quite a few options for remote shooting. Camera settings The third and final main menu option in Canon Camera Connect app is probably the most useless: Will read JPG files taken from any camera If you have JPG files taken from any other devices, the Canon Camera Connect will likely be able to read, and transfer them to your phone or tablet. What the app does not do These are shortcomings, specific to using the app with the Canon 6D; some of these issues may not be points of contention when using the app with other compatible camera models. Adjust to portrait mode while remote shooting If the app does allow this, the user interface needs to be adjusted to make this feature more obvious. Remote shoot video Whenever the Wi-Fi function on your Canon 6D is enabled, you cannot simultaneously activate video recording, so unfortunately remote video shooting cannot be achieved. Time lapse While you can set your camera to shoot in continuous or self timer mode with the app, there is not the option to shoot time lapses. This is a feature that Canon will hopefully implement in future iterations of the app. Hopefully this overview will help you see if this app is useful for you. If you have one of the compatible cameras listed , give it a try and let me know what you think.
