

Chapter 1 : How to choose a bias in BTS | ARMY's Amino

With all the talk about love-rage and bias-list ruiners recently, it seems an appropriate time to help people new to K-pop (or people with decision-making trouble) choose a bias. There are a myriad of factors that go into choosing your bias in a group, and even more that go into choosing your ultimate bias (but that's another story all together).

Gray looked like a safe color choice to this homeowner. The Challenge Previous roof colors were warm with a yellow hue bias matching the brick in a somewhat monochromatic manner. Which is a typical exterior color scheme. The color relationship changed from monochromatic-like to levels of color contrast: The light value brick to the darker value roof. Objective was a cohesive color scheme instead of a curb appeal story of dramatic and discordant color relationships and contrasts. The opportunities to add more color to create a well-rounded color scheme were few on this facade. Just the door and the shutters. Which means it was critical to get the colors right. The hue bias of the brick, for example, is no different than if it were painted siding. Because roofs, gutters, shutters, doors, etc. Once the new roof and gutters were installed, the homeowner suspected the color choices he made were a mistake. No use looking at it that way. Painting the gutters was an option but I thought unnecessary because the sand pebble clay could work. The color family created with the brick, door, trim and gutters is also balanced. Juxtaposed, the two are a cohesive, technically correct and balanced exterior color scheme. This took me a bit to figure out. If for no other reason than there are always at least three solutions to every color challenge. It requires time to define and determine. An important takeaway is you do not have to narrowly align or match hue bias or color temperature. Color relationships and true color design is about contrast as much as alignment. Which one is better depends entirely on each unique room or house. Another takeaway is I did this virtually. You really can do this! Read these other blog posts and add to your color skill set.

Chapter 2 : A Quick Guide to Choosing Your K-pop Bias “ seoulbeats

How to Find Your Bias in a Group (Kpop) In Kpop, the member of a group who just happens to be your favorite is known colloquially as your "bias". If you're wondering who you like most in a Kpop group and who is your bias, the following instructions will help you to work this out.

These will include what position you play, where you play and how you play! There are a number of options available to you whether you play indoor or outdoor bowls. It can be quite a tricky task, especially if you do play a mixture of indoor and outdoor bowls and only wish to purchase one set of bowls. You may have to compromise somewhat and choose a bowl that suits the indoor surface predominantly and use them to the best of your ability for the outdoor games. The variation between a slower often wet and heavy outdoor lawn is just too great compared with a faster indoor green. Which Lawn Bowls Bias to Choose? Unlike the crown green game, where a 2-full bias is standard, the flat green game offers more selection when it comes to choosing a bowl and its bias. So which bias is best? Just by seeing the visual trajectory of the various bowls should give you a good idea of which models to eliminate from your selection. Other factors that you should bear in mind when choosing a lawn bowl is the speed of the green on which you will be playing on. Will you be mainly playing indoor bowls or will it mostly be outdoors play? As a general rule, the faster the playing surface, the narrower the bias trajectory so keeping that in mind should also help with your decision making. At the end of the which bias to choose comes down to personal preference. There are no rules on what bias you can or cannot use in any aspect of the flat green game - whether that be indoor or outdoor bowls. Lawn Bowls Bias Chart The chart below highlights the bias and different trajectories of the various models from the manufacturers that we currently stock. This visual guide should help you to further refine your choices of bowls and which to consider purchasing. Similar to our recommendations with buying crown green bowls, unless you have a physical impairment opting for the largest weight bowl that you can grip and handle comfortably is generally the best choice. A heavier bowl will carry more momentum on the green therefore it will require less effort to bowl and overall should make for a more accurate and consistent bowl. Lawn Bowls Size and Weight Chart The blow chart details the weight and physical size of the bowl and their corresponding manufacturing sizing. We will add subsequent sizing and weight charts for all the flag green bowl manufacturers that we have in stock. Below if the chart for the Taylor bowls flat green range. Useful Lawn Bowls Information.

Chapter 3 : How you choose your BLACKPINK bias? | allkpop Forums

You don't choose your bias, your bias chooses you. Essentially, there is no actual process to choosing a bias. Usually, there is simply a member who stands out to you in a music video or interview. However, here are some tips that might be useful Answer: You do not choose your bias, your bias.

Your hub for horsepower Get first access to hit shows like Roadkill and Dirt Every Day Join free for 14 days now Tire Development Without question, the most common misconception in the hot rod and classic truck industry is the origin of specialty tires. Some companies use existing radial tires and apply the sidewall treatment as a secondary manufacturing process. Modifying the sidewall of a tire does little for its structural stability, so other companies take the time to develop tires and manufacture them from scratch, with the sidewall treatment integrated from day one of production. Some molds are the original units from years past, while others are brand-new molds, built from original drawings from its original manufacturer or from scratch as a totally new design. For example, the very popular line of Firestone Deluxe Champion bias-ply tires are officially licensed by Firestone, and produced exclusively by Coker Tire. And though many bias-ply tires are produced from original molds, the use of modern materials and build techniques gives you the best of both worlds-authentic looks and modern manufacturing. Bias-Ply Most vehicles built prior to the s came from the factory with bias-ply tires, which applies to most classic truck enthusiasts. Folks with hot rod influence tend to lean more toward the vintage styling of a bias-ply tire, because of the very popular piecrust edges and narrow tread profiles. With bias-ply tires, it is common to have a wandering feel, as the tire is likely to follow the grooves or ruts in the road. The narrow tread width can also affect the way a vehicle handles, and the tall sidewalls offer a unique feel that only a bias-ply tire can provide. With the cord traveling straight across, as opposed to diagonally, radial tires offer a more flexible design, which translates to increased traction. Radial tires look great on the right application, but some hard-core hot rodders dislike the looks of radials on a traditionally styled car or truck. Radials have a smooth design with a rolled shoulder, instead of the piecrust design of bias-ply tires, allowing them to perform much better on wet and dry surfaces. Coker Tire was the first company to produce a wide whitewall radial tire, and did so in This design was a huge hit, and since then, Coker has introduced a number of different brands and designs to meet the needs of its customers. When doing further research, we found that brands like BFGoodrich, American Classic, and Coker Classic are available from Coker Tire, and each brand has a specific tread pattern and sidewall design. Coker also offers a couple of tire models that closely resemble a bias-ply tire, but feature radial construction. One example is the Coker Classic inch radial series, which has the tall and skinny looks of a bias-ply, as well as a robust shoulder, instead of the smooth, rolled shoulder like most radial offerings. Radial internals make for great driving characteristics with the vintage looks of a bias-ply tire. Well, there are still a few steps to be made before you can start driving. First is mounting and balancing the tires to your existing wheels-this can make or break the way a vehicle drives. Inflating the tires is a straightforward process, but there are advantages to using nitrogen inflation, as opposed to regular air. Sometimes, regular air can pass through the sidewall of a tire, and eventually lead to a brown whitewall. The larger molecules in nitrogen lessen the chances of this occurrence, and it produces less heat buildup within the tire, which keeps pressure consistent. Balancing is a critical part of the process and most everyday tire shops use a balancer with a hub-centric mount, which means the wheel is attached to the machine by the center hole of the wheel. For a better and more accurate reading, specialty tire shops use a lug-centric mount, so the wheel can be mounted to the machine exactly how it would be mounted to the vehicle. When it comes to balancing, many original steel wheels will be out of round, or have a slight warp because of the years of abuse. This makes it tough to balance the tire and wheel assembly, so lots of folks end up buying new steel wheels. These are also available through Coker Tire, so you can buy tires and wheels together and have the folks at Coker do the mounting and balancing for you. From our vantage point, this is the right play, because it greatly simplifies the process and allows you to reap the benefits of nitrogen inflation, and skip mounting and balancing all together. From there, just bolt them on and hit the road with your brand-new tires. Whether you choose bias-ply tires or radials, or make the always tough decision of black

wall or whitewall, finding the right tires for your classic truck is a key element to enjoying your time behind the wheel.

Chapter 4 : Atheists Casting Evidence to the Wind, Choosing Confirmation Bias Instead of Thinking

i do not own any of used clips, photos and music pls don't sue me this means the world to me and i worked really hard on this video last time i uploaded it i.

So, another lie from him. Not what I said at all. October 20, at 8: Please read my post again. I think you are guilty of confirmation bias. But, personally, I do think he is guilty of many crimes against women, and should definitely be serving time. And assuming you think I am playing some sort of party double standard, I believe Judge Clarence Thomas should not have been confirmed either. I am just asking if you are speaking factually when you say she did. Or if you are misrepresenting her actions. Some people do have motives for not wanting Kavanaugh confirmed. Is she one of them? Does her acknowledgement that her testimony would probably not affect the outcome of the confirmation process indicate she thought this would stop him from being confirmed? Who has more credibility: But all of it does directly answer the claim that she had no reason not to be telling the truth. By definition, none of your suppositions directly answers anything. And certainly not the claim that she had no reason not to be telling the truth. If you could provide evidence that any of those things was true THEN you would have directly answered the claim that she had a reason not to be telling the truth. The confession of the perpetrators themselves? Do you think, with something as important as a life time appointment to the SCOTUS on the line, that a proper and unfettered investigation into the allegations by the FBI would have been reasonable? Do you think an innocent man would have welcomed that investigation? President Trump had a whole list of them. I think the main difference is, they could have gotten someone more honest, with better character.

Chapter 5 : How to Find Your Bias in a Group (Kpop): 5 Steps (with Pictures)

When it comes to choosing a bias physically and stylistically, there are a number of archetypal categories to look out for in a group. This comes down to the standard question, "what is your type?" because the same types will show up over and over.

There is a simple solution to this: Has anyone really been able to stay true to their bias? But be completely honest here. If you have, please tell me your ways, senpai. But why not attempt to choose just one bias? And each of these abilities appeal differently to different people. Now, which personality draws you in the most? Underneath all of those layers of social awkwardness is a man with a gummy smile and a big heart for music namely his piano , basketball, and Kumamon. He has the power to light up even your darkest days. Rap Monster is the most intelligent of the members with his IQ of , which really shows in his work. Honestly, everything he says enlightens me. He knows passion better than anyone and sticks to his passions no matter what. V truly is an interesting character. Let the boy live his life as he does, happily. He makes sure to enjoy every bit of his life, whether for himself or the people he loves. I admire that so much. This kid could probably fly if you challenged him to it. Their hearts The hearts BTS makes and the kisses they throw are the cutest things ever. Jin enjoys his loving flying kisses. Jhope seems to enjoy making hearts with his hands, and sometimes kissing that too. Rather than lazy fan service, Rapmon just seems to be into variety. Jimin makes a lot of simple hearts with his fingers. V goes all out with everything, including his full body hearts. Jungkook does everything in his own ways, usually to make people laugh. We all love this one! Their skin is so This differs for everyone, and if you want you can check out my post Main Dancer Analysis to read more of my insight on this. Their preference on Converse. If you like Converse, Suga may not be your way to go. Still, I would recommend Converse lows around the other members. Have a nice day beautiful people!

Chapter 6 : How to Overcome Unconscious and Hidden Biases (with Pictures)

Find out who your Got7 bias is. Who would you want as your best friend?

With all the talk about love-rage and bias-list ruiners recently, it seems an appropriate time to help people new to K-pop or people with decision-making trouble choose a bias. Next time you discover a new group or find yourself torn between two members in the same group use this simple guide to help you decide. The first thing you are going to want to consider is which member you find the most physically attractive. This may sound shallow, but immediate attraction is the easiest jumping off point for bias selection. For example, when I discovered SHINee I watched all the MVs they had released and chose the member I thought was the most stylistically and physically attractive over all the concepts, which ended up being Onew. His hair and clothes were to most constantly appealing to me and his adorable smile is not to be ignored. When it comes to choosing a bias physically and stylistically, there are a number of archetypal categories to look out for in a group. Maybe you like big teeth, or eye smiles, or strong noses, or tall people, or short people, but regardless by trusting your initial attraction you can take the first step in choosing a bias. The first thing to know is what role does your potential bias play in the group? Are they a vocalist, or a dancer, or a visual, or a rapper, or perhaps a support member? You may find that after a while you are drawn to a certain role in a group, not just a certain type of person. There are people who always prefer the rapper, probably because of the image that goes along with that role, and people who find a good singing voice attractive, no matter what the idol may physically look like. This can also be a bias breaker, because there are times when the most physically attractive member in a group may also be the least talented in other aspects. This may not deter you, you may stay true to your original instincts about an idol even if you find out their live singing voice is sub par, but it is always something to consider. There are also times when an idols seeming lack of talent may be what endears them to you. P is known for his somewhat awkward dancing, but instead of fans liking him less because of it there are many people who think it adds to his unique charm. When choosing a bias, be sure to keep your eye out for any talent that may arise. If the group has done an independent reality show, that only showcased them, then you are in luck because that will be sure to give each member at least a little screen time. Sometimes the most beautiful faces hide the worst attitude, and vice versa, you may find that you are suddenly attracted to an idol you never would have expected to be because of their awesome sense of humor or sweet nature. This is always something to look out for, because inevitably your bias will say or do something that will bring them under criticism, but at the end of the day we are all human so it is important to choose a bias with that in mind. Like with talents, or lack thereof, personality traits, or personality flaws, are what are endearing about each idol. Do you prefer out-going people or shy, introverted people? Do you like a bit of attitude or do you prefer the sweet, polite type? No natural aegyo or lots of it? What about you, readers? How did you choose your bias?

Chapter 7 : Choosing The Right Tires - Hot Rod Network

If you like Converse, Suga may not be your way to go. Still, I would recommend Converse lows around the other members. Maybe this helped you choose a bias, or maybe it made you fall deeper into confusion.

Chapter 8 : Which BTS member is your bias?

Take this quiz to find which BTS member should be your bias!

Chapter 9 : Bias | Definition of Bias by Merriam-Webster

Bias through statistics and crowd counts 5. Companies and public relations directors supply news outlets with puffpieces through news releases, photos or videos.
