Loved by the fans of the House of Marvel but ignored by everyone else. Therefore, it is easy to see why Marvel has decided to go all out with Dr. And it shows, for all the stops that Marvel has pulled to ensure Dr. After a horrific car accident robs Dr Stephen Strange of his physical abilities as a neurosurgeon, he travels to Tibet to seek out a cure. As he trains in the ways of the mystic arts, he comes to terms with his purpose in life, not just as a doctor but also as a person. The Marvel Method works, the director is now a puppet, a messenger to dictate the whims of the executive board. Everything feels like a Marvel movie, from the opening pop track to ease the viewers into the character of Doctor Stephen Strange, to how the cinematography looks, and it does look like every other Marvel film out there more on that later. Similar to other origin stories in the Marvel slate of films, this film has an extremely distinct pattern in its narrative. Hero is arrogant, hero loses everything, loses redeems himself and figures his role in a greater world. Nothing in the story particularly stand out, the characters do what they need to do to establish the story and nothing more. There is a pedestrian tone to the film, swap Dr Strange for Antman, or Iron Man and with a few minor, adjustments in terms of powers and villains, it is still the Same. When he is humbled, it is not because he has learnt his lesson or his place. It is neither, he just behaves because that is how the script needs him to behave. The audience becomes a bystander instead of an active participant in the movie going experience, just watching events go by, unable to relate to the cosmic battles that unfold before our eyes. Considering that the cast is made up of phenomenal talent, it is a tragedy to see them go to waste in generic and rigid roles. The formulaic script hampers the performances, actors are burdened by the script rather than empowered by it. Benedict Cumberbatch is up to the task of Dr. Stephen Strange but that is not saying much, he does not have a lot to work with in the first place. While the character is established adequately, characterization remains a problem. Cumberbatch mopes around for much of the film, relying on his awkwardness to generate some physical comedy and his stoic arrogance to emote. Mordo fares better but not by much, he is a full on exposition machine, constantly informing the viewer about backstory, but Chiwetel Ejiofor infuses the character with a sense of world weariness and bitterness that allows the character to be the most memorable in the film, even if these moments are few and far between. The Marvel Villain Syndrome strike again, as even the talented Mads Mikkelsen is unable to salvage a bland, badly written villain in Kaecilius. More caricature than character, Mikkelsen gives a stone faced performance with nothing to his backstory other than a few choice exposition by Mordo, the fatal flaw of too much telling and not much showing. Mikkelsen none the less tries his best to lift the material he is given but it is a case of too little too late. This is an alarming trend in Marvel films. After 8 years of constant, intensive worldbuilding, the Marvel Cinematic Universe has yet to have an iconic, centerpiece villain that could hold a movie on his or her own. This lack of quality villains affects the quality of the overall film, as the hero literally has nothing to struggle against, Strange is fighting himself more than he is fighting Kaecilius. The navel-gazing protagonist approach clashes widely with the blockbuster narrative that Marvel is trying to sell with Dr. Strange and the end result is neither an intimate character piece nor an epic blockbuster. It just feels mechanical and generic. I understand the need to have a consistent look across the entire Marvel universe but this enforcement of visual style is starting to adversely affect the end product. Generic framing and the abuse of the mid shots turns the cinematography into unspectacularly visual monotony. You got to wonder though, if all these movies look alike, with similar narratives and storylines, offering nothing visually interesting, then what exactly are we paying to see? It showcases a brilliant, vibrant universe that could have been explored. Sound and fury, signifying nothing. Speaking of sound, Marvel somehow manages to squeeze out the most generic score out of Michael Giacchino, one of the greatest score composers working today.

There is nothing of note in the aural Marvel universe and rather than choose to break new ground, Dr. Strange only reinforces the Marvel house style of generic action and emotional themes. Maybe in terms of movie marketing, Marvel did something right by leaving out an iconic soundtrack. Scott Derrickson is primarily known for low budget genre fare and he does not manage to get any of his stylistic signatures on this film at all. There are no obvious artistic or creative considerations, no moments of strong cinematic interests. Tilda Swinton is a great actress and puts up a great portrayal of the Ancient One, that said, she offers nothing special to the role that any actor or actress of Asian descent could have similarly pulled off. This is a problematic character, as are the Dr. Strange tries to be faithful to the comics while being as inoffensive as possible. Asian actors only serve as window dressing, hovering around the actors of western descent, never truly penetrating the narrative, they are part of the background, props and production design. Even Wong only serves to provide comic relief, while it is an admirably attempt to break Wong out of his offensive manservant role that he occupies in the comics, it is still messy in its execution. Unlike the comic relief characters of previous Marvel films, from War Machine to Drax the Destroyer, Wong is written to be unthreatening to anyone, we do not see him kick ass, instead he gets schooled by Dr. Strange when the latter steals books from the library. No, there will be hell to pay if that happens and the outrage will be much bigger. There is a lot going against Dr. Strange, weak direction and cinematography, generic score, mundane performances. In the film industry, there is no bigger championship than reigning supreme at the box office. Instead of a director led offense of artistic daring, Marvel has proven that it is the defensive mentality of formulaic filmmaking, great branding and ambitious marketing that leads you to the title. For better or for worse, Marvel movies are now in a league of their own, every new entry, no matter the quality, only serves to reinforce their dominance. There is no doubt Dr. Strange will rule at the box office but it will also change the way filmmaking will be perceived as an artform and the roles within film production. The Marvel brand has bailed out its product for a quite a while now, the big question is, how much longer can it do that? Strange, you should watch: Iron Man- The bible of which the entire Marvel Cinematic Universe is built on, every film that came after is slavishly influenced by this one. This is 80s kitsch at its finest. Inception- Visual effects weaved into an intricate, compelling plot. This is how CGI is supposed to be used. His greatest film and also one of the greatest direct to video films ever made, is Universal Soldier: The only way to describe it would be a Jackie Chan film by way of David Lynch. It has to be seen to be believed. Valhalla Rising- Mads Mikkelsen plays a one eyed slave on a journey to Jerusalem. Valhalla Rising is a brutal, unforgiving fever dream. His latest short film Hard Vision, is currently on its festival run.

Ballard explored the psychological, sexual, and even epidemiological implications of landscape design. Just as our city streets are wide enough to accommodate the turning radius of a specific class of passenger vehicle, our office cubicles, kindergarten playrooms, courts of law, and university lecture halls could be measured against the infectious vectors of specific pathogens. In the geometry of objects around us are the outer infectious edges of diseases we no longer suffer from; we have literally designed them out of modern space, denying their ability to spread. Each piece varies just slightly from the rest, in that their measurements have been dictated not by human comfort, international rates of shipment, or even by industrial timber specifications, but by the distances medically necessary to maintain between yourself and others in order to avoid respiratory infections. The common flu is now a dining table measured exactly against the reach of sneezes; SARS is a cubicle lined with an industrial felt that absorbs all coughs; pneumonia is a bar stool, hand-crafted from white pine, with a circumference of rails to prevent people getting too close. Swine flu, we could say, is a spatial problem – an epiphenomenon of landscape. Referring to the increasingly popular and somewhat utopian idea that, in the sustainable cities of tomorrow, agriculture will have returned to its rightful place in the city center, Arbona asks: But there were very real epidemiological reasons for taking agriculture out of the city; finding a new place for urban farms will thus not only require very intense new spatial codes, it will demand constant vigilance in researching and developing inoculations. Few people want to see burning piles of livestock in Times Square or Griffith Park, let alone piles of human corpses infected with H5N1. Avian flu, foot-and-mouth disease, swine flu: The space around you is no mere architectural stylization; it is a strategy of containment. The modern city would thus not only be a place to live – it would also be a functioning medical instrument. Part of her project dealt with the history of sanitarium architecture and, from there, the health implications of modern architecture. Popular ideas about what constitutes a healthy environment gave rise to many of the components that became the formal trademarks of modernism – the flat roof was devised as a means to provide additional sunning surfaces for tubercular patients; while the deep verandas, wide private balconies, and covered corridors served as organizational tools to isolate contagious patients from the general staff. In other words, at its origins, modern architecture was a kind of medical prescription – not a pill you swallowed but an environment you surrounded yourself with. Visits to these establishments were prescribed, as were the conditions and durations of the exposures themselves. Today, of course, there is ongoing research to determine how and to what extent environmental factors such as temperature, natural and artificial light, and sound affect our health, and despite there having been some interesting conclusions, it is still an area of research that requires more investigation and exploratory trials. This idea, of controlled exposure to specific architectural forms, makes the equation between built space and medical treatment explicit. How, then, might we expand and re-apply this research to whole cities in an era of swine flu and SARS? Here, utopia could be retheorized as the city where no one gets sick. Through microbe-resistant building materials and a precisely measured anti-contagious spatiality, perhaps, your metropolis might even cure you. Utopia becomes a hospital ward the size and shape of a city. Design your vision of the healthy city, these doctors will be told; what urban forms will result? Everywhere these discourses reinforce one another. Just as the Victorian middle classes could not escape the diseases of the slums, neither will the rich, bunkered down in their country clubs or inside gated communities. This ongoing obsession with illegal immigration has become a one-stop phantasmagoria for – everything. Of course, it goes back to primal, ancient fears: If the Centers for Disease Control could design a city, what would it look like? Could there be a medical equivalent of Baron Haussman or Robert Moses? What is medical urban design? Robert Moses stands above a model of the city he would create; via Wikipedia ]. was pointed toward a demonstration program: For infected districts, shades of red are used to indicate the level of infection. Darker red means that there are more infected people in the region and lighter red means that fewer people are infected. The viewer can see that the virus is stopped very quickly using the optimal design: The implication seems clear: Of SARS and the city: Design the ultimate disease-free city: Your goal is to redesign a city in real-time in order to extinguish a burgeoning plague epidemic. Perhaps SOM could sponsor it and own rights over the winning results in an attempt to corner the market in infection-free city planning. The all-time winner infects the world in less than a second. The book consistently raises the issue of public health as an urban design concern and, at the risk of repeating myself here, it would seem like epidemiology should be a vital part of all city planning courses. Pushed too far, one of the resulting landscapes becomes completely abiological, incapable of supporting life, sterilizing everything through the design of space alone. Add to this demographic information about who lived where in London at the time, the economics of things like 19th-century water delivery, and the changing nature of medical treatment, and you get a fascinating look at how certain cities either cultivate or effectively stop the spread of diseases. The sewers of Paris as photographed by Nadar ; taken from an article by Matthew Gandy ]. Doing so apparently made him obsessed with cancer; it was the only thing he talked about. As the two of us walked through the unbelievable stench of Parisian wastewater, watching used condoms float by and rats crawl away in the darkness ahead, and while we listened to the slightly bemused narration of our female tour guide, the backpacker began telling me about the possible viral nature of cancer, the incurability of certain forms of the disease, and the inevitability that most of us would, in the end, develop it. In 50 years will you be walking around the edges of the city with your grandkids when one of them asks: Why are these buildings out here, so far away from the rest? We redesigned the city and our diseases went away.

She was destined to become one of the longest-serving monarchs in British history. Three of her children were divorced amid much controversy. Then a young and not-yet-internationally famous Canadian actor, Christopher Plummer arrived in Bermuda. Performing for visitors and locals at a small theatre at the hotel, the Bermuda Repertory Theatre was for several years a magnet for young, up-and-coming American and Canadian actors. He flew a Piper Cub and used his flying jaunts to take many photos of the Island. The founding members were all Heads of Government Departments who included: Collector of Customs; Mr. Martin Godet, Senior Magistrate; Williams, Inspector of Schools. A statement issued on behalf of the group said, "Recognizing the importance of its Civil Service establishments to the smooth and efficient operation of any country, and being gravely concerned over the fact that it was becoming increasingly difficult to induce qualified young men and women to enter the Civil Service of Bermuda, and what that portends, a number of civil servants met some months ago to consider the situation. The Committee of 25 was established by a group of non-Bermudian women. Initially, they were appalled by conditions at the Packwood Old Folks Home. Many died, including Capt. Bermuda had been well prepared for such a rescue operation, due to the previous establishment at Kindley Air Force Base of crash boats imported and operated especially for such an emergency. They leapt overboard without lifelines or preservers, in an attempt to rescue the passengers. But despite their heroic efforts, and those of others, in rescuing four people, the balance of the passengers and crew of the stricken aircraft - some thirty seven people in all - perished from wounds incurred in the crash. First of three visits of John F. Kennedy to Bermuda, at the age of 36 and about to become a Senator. It was then owned by his friend, wealthy American Oliver Newbury. The same thing had happened a little earlier to the black Speaker of the Barbados House of Assembly, bound for London for the same reason, who also went from Barbados via Bermuda. Holmes, Williams and Purvey HWP immediately started negotiating with a view to being appointed as Managers, and with the completion of the station early in were informed they had been successful. Despite the limited property-based franchise, nine of the black candidates contesting seats in the general election were returned as members of the House of Assembly. Death in Bermuda at the age of 81 of John J. Bushell, whose Bermuda handbook tourist guide made him a unique local resource. The superstition surrounding this play may have affected him in more ways than one. According to legend, this dates back to the premiere of the play in the early 17th century: Catherine directed by Burgess Meredith. Heston pictured below suddenly rushed off stage, pointing at his tights, writhing in pain and yelling: Fortunately, nobody was injured. After their brief one day Bermuda visit they flew to Jamaica, their next stop, where they boarded the steamship Gothic to New Zealand. For months beforehand, UK newspaper snippets appeared about the schedule, weather and transport. The tone was solicitous, almost anxious, perhaps understandably. Elizabeth was the fourth monarch on the throne in less than 20 years and had two young children she would have to leave behind for six months. But during the same excursion he contracted a chill which turned into a bad cold, as the result of which his Foreign Minister, M. Georges Bidault, substituted for him for the rest of the conference. Their geopolitical discussions centered mostly on relations with the USSR as the post-war Cold War began to intensify. Dogs are social beings who thrive on interaction with people and animals. A chained dog can suffer psychological damage. A continuously chained dog usually becomes anxious and aggressive. Their necks can become infected from too-tight collars. Chains get tangled, strangling the dogs. Ask any vet or animal care worker whether a stray dog or chained dog living outside around the clock has a better chance at survival, and the stray dog wins. On December 15th, CBHR received a request from someone to re-home 3 bassets as the owner was very ill and needed to go to another state immediately for medical care. When our volunteer arrived at the home to pick up 1 young male and 2 female bassets, the situation quickly eroded. Our volunteer was told the male was staying but three girls would need to go. One of the girls was being kept outside surrounded by barbed wire, while the other two were chained to trees with padlocks. As all three girls were emaciated, the collars were easy to remove from two. The chain was broken on the third and the volunteer took off with all three to head to a partner vet in Durham, NC. Despite the intensity of this cruelty, the girls showed nothing but love and gratitude while the veterinary team worked on them. They were given names to reflect the spirit of the season: Faith, Hope and Grace. Each was severely emaciated and suffered from intestinal worms and skin issues, but surprisingly all were heart worm negative. And Hope appeared to be pregnant. An x-ray confirmed she was very pregnant, just a couple weeks from delivering at least 4 pups. This was obviously a high risk pregnancy, especially for the pups who had experienced the worst of prenatal care. On January 9th, Hope delivered 7 beautiful, healthy puppies. What an amazingly wonderful way to start our rescue year. Faith moved to Charleston, and her foster mama knew from the moment she picked her up this girl was never leaving her side again. Faith is now Vivien Leigh and calls Charleston her home. Grace spent two months with a loving foster mama and foster siblings, and was adopted by a family just ready to move on after losing their beloved basset, Talullah. This is the best of rescue; we went to save three lives and ended up saving ten. Thank you, as always, for your support. You can see more pictures of the puppies with their individual bios.

*Wales is particularly proud of two of its poets: Dylan Thomas and R.S. Thomas. There is an irony here in that, at least for much of their lives, both Dylan and R.S. were very rude indeed about the sort of people who now hail them as heroes.*

Meet The Family Wales is particularly proud of two of its poets: Dylan Thomas and R. There is an irony here in that, at least for much of their lives, both Dylan and R. Thomas was embraced while he was still alive and is famous as a nationalist poet who was very hostile towards the English. To live in Wales is to be conscious At dusk of the spilled blood That went into the making of the wild sky, Dyeing the immaculate rivers In all their courses. It is to be aware, Above the noisy tractor And hum of the machine Of strife in the strung woods, Vibrant with sped arrows. You cannot live in the present, At least not in Wales. There is the language for instance, The soft consonants Strange to the ear. There is no present in Wales, And no future; There is only the past, Brittle with relics, Wind-bitten towers and castles With sham ghosts; Mouldering quarries and mines; And an impotent people, Sick with inbreeding, Worrying the carcass of an old song. This was not the only time that Bluglass "let alone his network" came to the rescue of Dafydd and the gang. Which was established and managed by Dr Chris Hunter, who was the man who Chaired a case conference about me and took evidence from Tony Francis and Dafydd as well as a number of people who had never met me, just before the first Inquiry into Ashworth, the Blom-Cooper Inquiry. Chris Hunter had never met me either. Hunter concluded from his case conference that I had was extremely dangerous, had a homicidal capacity and he offered to prepare an opinion for the Court. Was I facing any charges at the time? No, I was, when the case conference took place, sitting in a London Medical School and as a postgrad not a patient. I knew nothing of this case conference until some four years ago when I finally received copies of all of my records. I had never previously heard of Chris Hunter. When a patient at Ashworth was battered to death by the staff, it was Bluglass who investigated. My complaint was not investigated but I did refuse to shut up about Rose. This collection of people traffickers and abusers were all one big happy family, as foul as the foulest that could ever have been conjured up by the imagination of R. Some years ago, Bluglass mysteriously requested that his name should be removed from the Medical Register and he virtually disappeared from the internet as well, or he did until I began this blog. The only reason why a Top Doc asks to be removed from the Medical Register is in the event of them having been caught red handed doing something so serious that a major scandal is threatened. That Bluglass was almost erased from medical history was extraordinary, because for years he was considered to be the leading forensic psychiatrist in the UK and he wrote the Mental Health Act So no-one should have been surprised that, when Dafydd Did it Again, ie.

### Chapter 8 : Items where Year is - Sheffield Hallam University Research Archive

*Tag: Moss Side Hospital Sir Peter's father, Sir John Moores, was the founder of the Littlewoods company, although the family no longer owns it. In the Sunday.*

The Wilson family settled in St. Louis , Missouri when Pete was in elementary school. He then attended the private, non-sectarian preparatory middle school John Burroughs grades 7â€”9 in Ladue , and then St. Louis Country Day School , an exclusive private high school, where he won an award in his senior year for combined scholarship, athletics, and citizenship. In his junior year he elected to join the Marine Corps upon his graduation. After graduating from Yale, Wilson served for three years in the United States Marine Corps as an infantry officer, eventually becoming a platoon leader. After passing the bar exam, Wilson began his practice as a criminal defense attorney in San Diego , but he found such work to be low-paying and personally repugnant. He put in long hours for the Goldwater campaign, earning the friendship of local Republican boosters so necessary for a political career, and in , at the age of thirty-three, he ran for, and won a seat in the California State Assembly , succeeding Clair Burgener. Wilson was re-elected to the Assembly in and , and in was elected mayor of San Diego. However, in May the Republican National Committee voted to move the convention to Miami because of a scandal involving a donation to the event by ITT Corporation , as well as concerns about the proposed venue the San Diego Sports Arena and the adequacy of hotel space. Wilson was known as a fiscal conservative who supported Proposition 13 , although Wilson had opposed the measure while mayor of San Diego. However, Brown ran on his gubernatorial record of building the largest state budget surpluses in California history. Both Wilson and Brown were moderate-to-liberal on social issues, including support for abortion rights. The election was expected to be close, with Brown holding a slim lead in most of the polls leading up to Election Day. President Ronald Reagan made a number of visits to California late in the race to campaign for Wilson. Despite exit polls indicating a narrow Brown victory, Wilson edged him out to win the election. The surgery was expected to keep Wilson hospitalized for days, but Wilson returned to Capitol Hill via an ambulance to cast a vote in favor of the budget on May On January 20, , he presided over the inauguration of George H. Bush as President of the United States. In , he resigned from the Senate after winning the California gubernatorial election. On October 2, , Wilson, away from Washington to campaign for California governor, became the only sitting senator from either party to not vote on the nomination of David Souter for Associate Justice on the United States Supreme Court. He had previously endorsed Souter for confirmation. Senate seat two years later. During his term, market-based , unsubsidized health coverage was made available for employees of small businesses. Despite his belief in fiscal conservatism, Wilson raised the sales tax to reduce the state deficit, including imposing a sales tax on newspapers which did not have one up to then and "snack" foods. The revenue gap had increased by 5 billion in the four months of his governorship. Wilson returned the budget bill to the legislature without his signature, revoking a prior commitment to vetoing the measure. The legislation was intended to address a rising cause of poverty among children and women in the state at a time when unpaid child support in California totaled to 2 billion annually. Wilson feared that the bill would increase lawsuits and make California less competitive economically. Wilson promoted standardized testing of all students, increased teacher training, and a longer school year. Wilson said secondhand smoke "threatens the health of non-smoking state employees" and charged workplace smoking with increasing the cost of cleaning, damaged furniture and carpets, and heightens the chances of starting fires. Two years later, Wilson became, to date, the most recent governor to speak at a California gubernatorial funeral, that of former Governor Pat Brown. For most of his time as governor, Wilson reduced per-capita infrastructure spending for California, much as he had done as the Mayor of San Diego. He was succeeded by then- lieutenant governor Gray Davis as governor. A bill imposing the continued reduction of benefits was passed by two committees of the Republican-majority assembly. We will demand that all citizens meet the test of common decency, respecting the rights of others, and we will demand that those who

can, pull their own weight and meet the test of personal responsibility. We will make clear that welfare is to be a safety net, not a hammock — and absolutely not a permanent way of life. We will correct our laws to make clear that bringing a child into the world is an awesome personal responsibility for both the mother and the father. The costs are simply too high for society to continue tolerating the promiscuity and irresponsibility that have produced generations of unwed teen mothers. It is monstrously unfair to the children; to their sad, ill-equipped teen mothers; and certainly to working taxpayers, who must support them at a cost to their own children. Paternity for each child would also have to be established for the mother to begin receiving benefits.

California Proposition As governor, Wilson was closely associated with California Proposition 187, a ballot initiative to establish a state-run citizenship screening system and prohibit illegal immigrants from using health care, public education, and other social services in the U. Voters passed the proposed law as a referendum in November 2002; it was the first time that a state had passed legislation related to immigration, customarily an issue for federal policies and programs. Opponents believed the law was discriminatory against immigrants of Hispanic origin; supporters generally insisted that their concerns were economic: Schwarzenegger was also re-elected in 2002. Since the following states have had similar ballot initiatives or laws passed: Wilson said the law was the result of four years worth of attempts on his part to toughen the laws against carjacking: Harris was executed in 2002. A total of five people were executed during his administration the first two in the gas chamber, the latter three by lethal injection. California electricity crisis Wilson supported deregulation of the energy industry in California during his administration due to heavy lobbying efforts by Enron. Wilson defended his record of power plant construction and claimed that between 2000 and 2002, 23 plants were certified and 18 were built in California. He completed a cross-country tour. The Wilson campaign had problems from the start. After deciding to run, he almost immediately had throat surgery that kept him from announcing — or even talking — for months. His campaign lasted a month and a day and left him with a million dollars in campaign debt. This debt was paid off in full in a matter of weeks. The same poll indicated Wilson as trailing Bob Dole by a point margin. He also served as chairman of the Japan Task Force of the Pacific Council on International Policy, which produced an analysis of Japanese economic and national security prospects over the next decade entitled "Can Japan Come Back? President Bush, [64] but Giuliani later dropped out of the primary. Hispanic and LGBT groups protested the unveiling.
