Redesigned Code Editor
Several productivity enhancements have been made to the Code Editor in Dreamweaver to enable you to get on with the task of coding quickly and efficiently. Code hints help new users learn HTML, CSS, and other web standards, and visual aids like auto-indentation, code coloring, and resizable fonts help reduce errors and make your code easier to read.

Code hints
The code hinting functionality in Dreamweaver is enhanced to provide more useful information for the selected code. In earlier versions of Dreamweaver, when you type a right-angle bracket, you get a drop-down list of relevant code. In this release, you not only get the relevant code, you also get additional information that helps you to quickly ramp up on HTML, CSS, and other web technologies within Dreamweaver itself. Enhanced code hinting
For more information, see Code hinting and code completion.

Code display enhancements
The overall appearance of the code is now enhanced for better readability. You can see improvements in code formatting, and code coloring.

Code formatting
When you write code, Dreamweaver auto-indents the code to circumvent erroneous manual indentation and improve readability.

Code coloring
Dreamweaver now supports code coloring for additional number of file types. You can change syntax highlighting for different file types directly from the status bar in code view. For more information on all these changes, see Coding environment in Dreamweaver.

Real-time Preview in browser
Quickly preview your code changes in browser in real time without manually refreshing your browser.

Quick editing of related code files
Quick Edit
To make quick changes to your code, place the cursor on specific code snippets and use the context menu, or press Ctrl-E on Windows or Cmd-E on Mac to access Quick Edit. Dreamweaver offers context-specific code options and inline tools. For more information, see Quick Edit.

Quickly edit related code without opening multiple files or tabs
In-context CSS documentation
Quick Docs
Dreamweaver provides in-context documentation for CSS properties, right within the code view. Quick docs help for CSS within the Dreamweaver code view interface

Multiple cursors to write and edit code
To write multiple lines of code simultaneously, use multi-cursors. To invoke multiple cursors, you can:
For more information, see Use multiple cursors to add or change text in multiple places.

Modern user interface
Dreamweaver is redesigned with a more intuitive and customizable interface, more accessible menus and panels, and a contextual and configurable toolbar that shows you only the tools you need. Here are before and after snapshots of the new user interface. Read on to learn more about these changes.

Workspace changes
The Dreamweaver interface is optimized to include the following default workspaces:

Developer workspace
This workspace is minimal, and by default, includes only those panels that are most essential for developers who code websites - for instance, the Files, and Snippets panels. After you select a workspace, you can customize it by adding or removing panels. For more information on customizing workspaces, see Create custom workspaces.
