Sixth Edition About Higher Engineering Mathematics by John Bird Now in its sixth edition, Higher Engineering Mathematics is an established textbook that has helped many thousands of students to gain exam success. Mathematical theories are examined in the simplest of terms, supported by practical examples and applications from a wide variety of engineering disciplines, to ensure that the reader can apply theory to practice. This new edition of Higher Engineering Mathematics has been further extended with topics specifically written to help first year engineering degree students and those following foundation degrees. New material has been added on logarithms and exponential functions, binary, octal and hexadecimal numbers, vectors and methods of adding alternating waveforms. This book caters specifically for the engineering mathematics units of the Higher National Engineering schemes from Edexcel, including the core unit Analytical methods for Engineers, and two optional units: Higher Engineering Mathematics contains examples, supported by worked problems and further problems contained within exercises throughout the text. In addition, 19 revision tests, which are available to use as tests or as homework are included at regular intervals. More recently, he has combined freelance lecturing at the University of Portsmouth with examiner responsibilities for Advanced Mathematics with City and Guilds, and examining for the International Baccalaureate Organisation. He is the author of some textbooks on engineering and mathematical subjects with worldwide sales of over one million copies. Inequalities; Revision Test 1; 6. Arithmetic and geometric progressions; 7. The binomial series; Revision Test 2; 8. Solving equations by iterative methods; Binary, octal and hexadecimal numbers; Boolean algebra and logic circuits; Revision Test 3; Introduction to trigonometry; Cartesian and polar co-ordinates; The circle and its properties; Revision Test 4; Trigonometric identities and equations; The relationship between trigonometric and hyperbolic functions; Compound angles; Revision Test 5; Functions and their curves; Irregular areas, volumes and mean values of waveforms; Revision Test 6; The theory of matrices and determinants; Applications of matrices and determinants; Revision Test 7; Methods of adding alternating waveforms; Scalar and vector products; Revision Test 8; Methods of differentiation; Some applications of differentiation; Differentiation of parametric equations; Differentiation of implicit functions; Logarithmic differentiation; Revision Test 9; Differentiation of hyperbolic functions; Differentiation of inverse trigonometric and hyperbolic functions; Total differential, rates of change and small changes; Maxima, minima and saddle points for functions of two variables; Revision Test 10; Some applications of integration; Integration using algebraic substitutions; Revision Test 11; Integration using trigonometric and hyperbolic substitutions; Integration using partial fractions; Integration by parts; Double and triple integrals; Numerical integration; Revision Test 13; Solution of first order differential equations by separation of variables; Homogeneous first order differential equations; Linear first order differential equations; Numerical methods for first order differential equations; Revision Test 14; First order differential equations of the form; Power series methods of solving ordinary differential equations; An introduction to partial differential equations; Revision Test 15; Presentation of statistical data; Mean, median, mode and standard deviation; Probability; Revision Test 16; The binomial and Poisson distributions; The normal distribution; Linear regression; Revision Test 17; Sampling and estimation theories; Chi-square and distribution-free tests; Revision Test 18; Introduction to Laplace transforms; Properties of Laplace transforms; Inverse Laplace transforms; The Laplace transform of the Heaviside function; The solution of differential equations using Laplace transforms; The solution of simultaneous differential equations using Laplace transforms; Revision Test 19; Fourier series for periodic functions of period $2p$; Fourier series for a non-periodic function over period $2p$; Even and odd functions and half-range Fourier series ; Fourier series

Chapter 2 : Engineering Applications of Higher Mathematics

Excerpt from Engineering Applications of Higher Mathematics, Vol. 5 This last part of the work contains problems in electrical engineering, and these, as well as the problems of the other parts, have been selected to illustrate the important principles of analytics and calculus.

Chapter 9 : Higher Engineering Mathematics book by John Bird - StudyVines

This is not a book on calculus or analytic geometry (the market is flooded with them); nor is this a book on engineering or any branch of it. The book is intended (to enable an engineer to make a better and more extended use of higher mathematics in his work.
