

Chapter 1 : A Hand-Book to the Flora of Ceylon

Volume 6 of Flora of Russia includes descriptions of species belonging to 65 genera and three families of the Order Fabales. Read more Read less Prime Book Box for Kids.

Published to Abstract This flora, in eight volumes, keys, describes and illustrates all of the flowering plants and vascular non-flowering plants, both native and naturalized within the borders of British Columbia. Keys are included for all genera, species, subspecies and varieties. Illustrated Flora of British Columbia, Volume 1: Gymnosperms and Dicotyledons Aceraceae through Asteraceae. PDF kb Douglas, G. Illustrated Flora of British Columbia, Volume 2: Dicotyledons Balsaminaceae through Cuscutaceae. Illustrated Flora of British Columbia, Volume 3: Dicotyledons Diapensiaceae through Onagraceae. Illustrated Flora of British Columbia, Volume 4: Dicotyledons Orobanchaceae through Rubiaceae. Illustrated Flora of British Columbia, Volume 5: Dicotyledons Salicaceae through Zygophyllaceae and Pteridophytes. Illustrated Flora of British Columbia, Volume 6: Monocotyledons Acoraceae through Najadaceae. Illustrated Flora of British Columbia, Volume 7: Monocotyledons Orchidaceae through Zosteraceae. Illustrated Flora of British Columbia, Volume 8: General Summary, Maps and Keys.

Chapter 2 : Illustrated Flora of British Columbia - Volumes 1 to 8

Volume 6 of Flora of Russia includes descriptions of species belonging to 65 genera and three families of the Order Fabales. Table of Contents Volume 6 of Flora of Russia includes descriptions of species belonging to 65 genera and three families of the Order Fabales (families of the list of families).

During their visit, which included a tour of the Garden, lunch with the trustees, and a public and media event, the FNAA had an excellent opportunity to thank the Foundation for their support and bring them up to date on FNA volume development. In addition, the Chanticleer grant enabled the project to more than double the publication rate. The official dedication ceremony took place during the 16 May visit, with a presentation by Luc Brouillet to the Chanticleer Foundation Trustees. A full series of FNA volumes was presented to the Garden, and each trustee received a copy of Volume 4 and a framed copy of the artwork represented on the frontispiece. To learn more about the Chanticleer Garden, visit their Web site at <http://www.chanticleer.org>. Catriona MacGregor Glazebrook has joined the project as vice president of business and development. This half-time position was created in order to develop and implement a marketing, fund-raising, and business plan for the FNAA. Catriona will also represent the FNAA through public relations and media work. Catriona comes to the project with extensive experience in business planning and organizational advancement, development, and public and media relations. She has over 20 years of experience in advancing the conservation of plant and animal species, and the protection of civil rights. She has worked internationally in the U.S. In addition to her extensive organizational development work, she has a background in law and policy, education, and science, and is accomplished at initiating and implementing national and international science, education, and conservation programs. She has also been identifying potential sources for funding, and conducting interviews with FNAA members and staff in preparation for the FNAA business plan, a first draft of which will be completed in August. Catriona feels that the FNA project is a critically important one. Below is the planned publication schedule, from until planned completion of the FNA book series in 2008. The consequences of such a schedule are obvious: The initial assignment of taxa to particular editors has to be revised and the load spread among more people. Also, editors already assigned have to get very active in immediately obtaining treatments from authors. For more information, please see the FNA Web site, <http://www.fna.org>. Readers are invited to send appropriate news items to: news@fna.org. This need not delay progress. Lead time must be built up for later volumes to ensure a smooth flow.

Dilleniidae, part 1 Paeoniaceae through Loasaceae Volume 7
Magnoliophyta: Dilleniidae, part 2 Salicaceae through Resedaceae Volume 8
Magnoliophyta: Rosidae, part 2 Rosaceae through Surianaceae Volume 10
Magnoliophyta: Rosidae, part 3 Mimosaceae through Fabaceae, in part Volume 11
Magnoliophyta: Rosidae, part 4 Fabaceae, in part, through Combretaceae Volume 12
Magnoliophyta: Rosidae, part 5 Rhizophoraceae through Krameriaceae Volume 13
Magnoliophyta: Rosidae, part 6 Staphyleaceae through Apiaceae Volume 14
Magnoliophyta: Asteridae, part 1 Loganiaceae through Menyanthaceae Volume 15
Magnoliophyta: Asteridae, part 2 Polemoniaceae through Boraginaceae Volume 16
Magnoliophyta: Asteridae, part 3 Verbenaceae through Oleaceae Volume 17
Magnoliophyta: Asteridae, part 4 Scrophulariaceae through Orobanchaceae Volume 18
Magnoliophyta: Asteridae, part 5 Acanthaceae through Calyceraceae Volume 19
Magnoliophyta: Asteraceae, part 1 Volume 20
Magnoliophyta: Asteraceae, part 2 Volume 21
Magnoliophyta: Asteraceae, part 3 Volume 24
Magnoliophyta: The committees discussed the progress of current and future FNA volumes. Volume 5 will appear this year, and work towards the completion of volumes 19, 20, and 21 in will be credited to For the schedule of all other volumes, see page 2. The EXC also established a policy on microgrants for editors and authors. For details on microgrants, see article at right. These new policies, which are part of the new business plan being developed by the FNAA under the guidance of Catriona MacGregor Glazebrook, vice president of business and development, are already effective. The next committee meetings will be held in St. Louis in October, in conjunction with the 51st Annual Systematics Symposium see p. Craig Freeman has been named by the Board of Directors to fill this position. We give Ted our warmest wishes for a prompt return to better health. Wayne Elisens has been elected to the BoD. He is well known for his service to the botanical

community as a former member of the meeting committee of the AIBS; program director and council representative-elect of the ASPT; former meeting coordinator, program director, and systematics section chair of the BSA; and education committee co-chair of Systematics Agenda. He is also editor and contributor to the Flora Oklahoma project and the Oklahoma Vascular Plants database. Elisens will bring to the board his network and organizational skills, as well as his friendliness and botanical expertise. We welcome him warmly. Elisens may be reached at elisens@ou.edu. Microgrants are on the order of hundreds to a few thousand dollars. Their purpose is to facilitate the writing of treatments by authors who would otherwise lack resources, or to help editors accomplish their work. They are not grants for research. Obviously, the FNAA has resorted, and will resort in the future, to hiring staff botanists to write treatments for which no author is available. This is not part of the microgrant program. Grants for editors may include, among others, expenditures directly related to their FNA work phone, paper, etc. Authors submit their request budget and justification to their taxon editor. Requests may be made at any time. The EXC will periodically evaluate requests on the basis of merit and urgency. Volumes in preparation will receive higher priority than later volumes. Authors with serious health problems also will be considered in priority. Nevertheless, early requests will be welcome because they will allow the FNAA to plan ahead and take advantage of opportunities. Grants will take the form of a contract with due date for the manuscript, to be negotiated by the author, taxon editor, and editorial director. The payment schedule also will be negotiated, but payment mostly will be done upon receipt of the treatment and its acceptance by the taxon editor. Proof of spending and delivery of the agreed-upon manuscript or other work will be required before the final payment is made. For more information on microgrants, contact James Zarucchi at james.zarucchi@oup.com. Caryophyllidae, part 1, is now available for purchase from Oxford University Press. The volume describes genera and species. To order this or any published volume in the Flora of North America series, contact OUP, ; fax ; <http://www.oup.com>: As illustrations are completed, a Web version is included with the electronic publication. This arrangement has proved quite successful. Recent electronic publications of bryophyte treatments include Buxbaumiaceae, by W. Schofield; Catosciaceae and Seligeriaceae, by D. Vitt; Ditrichum and Saelania Ditrichaceae, by R. Seppelt; Donnellia Sematophyllaceae, by W. Buck; Grimmiaceae, by R. Greven; Rhachithecaceae, by B. Goffinet; and drafts of the Bryaceae keys, by J. He may be reached at richard@ou.edu. In January, we displayed Volume 25, Poaceae, Part 2, at the annual meeting of the Society for Range Management and received many compliments and expressions of interest. We especially thank Dr. Chatterton, who persuaded ARS to make a major commitment to the project. Work on the illustrations will start in July, with priority being given to Achnatherum, the first genus listed on the Web site. Completing its illustrations will help ensure that casual visitors to the Web site <http://www.ou.edu>: In March, Laurel Anderton joined the editorial staff, replacing Michael Piep as assistant scientific editor. We will also hire undergraduate and graduate assistants to work on the project in the near future. Plans for the coming year include readying the remaining large genera for review and processing others to the "all but final" stage nothing is final until the generic keys are written, completing the majority of the illustrations, and revising our mapping program to accommodate changes that have been made to the database of the Intermountain Herbarium. The other major task is developing two keys to genera, one artificial and one taxonomic. We are also committed to developing a more useful Web site. Our first goal is to create a searchable database of all the citations in the two grass volumes. Another goal is to develop effective multi-entry keys to some genera, or to the genera themselves. Improvement of the Web site, however, will take a backseat to the completion of Volume We thank all those who helped make Volume 25 a success, thereby enabling us to provide the strongest argument possible for funding Volume Mary Barkworth, lead editor of the Grass Center, can be reached at mary@biology.ou.edu. All genera in Polygonaceae and Plumbaginaceae, and all but four genera in Caryophyllaceae, have been submitted. The manuscripts are in various stages of review, some undergoing editing and others ready for final formatting.
