Indicator Rating Details The materials reviewed for Grade 6 partially meet the expectation for attending to the specialized language of mathematics. Overall, the materials identify and define correct vocabulary, but there are only sporadic places where vocabulary is integrated into the lessons. At the start of every chapter, there is a list of related vocabulary words that will be used in the chapter. Students are given a box that outlines key concepts and key words are highlighted in yellow and immediately defined. In each lesson that introduces new mathematical vocabulary, there is a vocabulary start-up that frequently uses a graphic organizer to help students understand the new vocabulary. The materials offer related vocabulary at the start of the lessons, however, minimal reference is made back to them as the lesson progresses. Assumption is made that mastery of vocabulary is immediate. At the end of the chapters, there is a vocabulary check included in the chapter review. Students are given sporadic opportunities to express mathematics vocabulary with the daily lessons. The materials lack consistent structures to make mathematics terms meaningful and incorporate high levels of mathematical language. There are few places where students are given the opportunity to write or explain in a way that the use of mathematical vocabulary is assessed. The vocabulary usually consists of key words highlighted for the introduction of the lesson with a given definition. Materials are well designed and take into account effective lesson structure and pacing. In essence, the difference is that in solving problems, students learn new mathematics, whereas in working exercises, students apply what they have already learned to build mastery. Each problem or exercise has a purpose. For example, students are asked to produce answers and solutions, but also, in a grade-appropriate way, arguments and explanations, diagrams, mathematical models, etc. Materials support teacher learning and understanding of the Standards. Where applicable, materials include teacher guidance for the use of embedded technology to support and enhance student learning. Materials offer teachers resources and tools to collect ongoing data about student progress on the Standards. Materials support teachers in differentiating instruction for diverse learners within and across grades.
