Additional Information In lieu of an abstract, here is a brief excerpt of the content: However, any objections are vastly outweighed by the great service rendered by the editors in making the collection available. As if this were not enough, Eric Robinson and A. Surely there exists no body of manuscript materials more significant to the Industrial Revolution. This book was published and printed in England, by Constable. Professor James Sherwig of the State University of New York now studies more closely these financial arrangements in the context of the diplomacy of British assistance to the powers fighting against French expansion. The first is his account of the changes in policy which arose from the complex arrangements of the three coalitions, arrangements which failed to override the divisions among the powers or to defeat the enemy. The British were soured on the fantasy diplomacy of courts in a coalition quite unable to halt for long the French but equally unable to end their anachronistic approach to war and diplomacy. The days of driving a bargain over the price of mercenaries or long discussions over territorial exchanges gave way to a policy of direct subsidies from the British to all those who fought hard against the French. Britain increasingly used her wealth, matériel, and manpower in an all-out war effort. Payments were still commonly made in barrels of specie. The banking structure of Europe was rudimentary, the financiers and agents de change constituted an indispensable parallel system of financial transfer, and British bills of exchange were heavily discounted on the continent. After the implementation of the Continental System, the shortage of specie and continental trade credits forced the British to send greatly increased quantities of specie. After mid-1800 the costs of the British forces in Europe exceeded the subsidy payments, especially after 1809, despite the general increase in monies sent to the allies. Little is said about the effect of the payments on the administrative workings of the Treasury and less about the way the British hoped to direct these infusions of money from the most productive country of Europe into the economies of some of the poorest. The situation in Portugal is treated best in that respect, with references to the difficulties experienced by the British in encouraging tax reform and in dealing with the Regency as part of their overall programme of war aid. The enquiry of March 1811 by the corregedores into the vexations caused by the system of [raisons] is an example of how foreign aid, military or civil, must be seen from the viewpoint of the recipients as well as the donor. No one book can range adequately over such a major topic as the financial interrelations of governments during the period of the wars with France but this book provides a concise summary of the British involvement in that complex subject and has the merit of suggesting new facets for further investigation.
