The page document has easy-to-understand explanations and good graphics.

Chapter 3 : Geography and History of the World

In this section you will introduce students to the 5 Themes of Geography using worksheets, activities, projects, and PowerPoints. Human Environment Interaction.

There are scientists who study states, boundaries, and capitals. Geographers also study the rest of our physical world. They study everyone and everything found on Earth. Geography is also the science of where things are located on Earth and why they are located in those places. It is much more than that! Geographers have created five important themes or topics in geography. The first theme is location. Think of the Earth as a bunch of space. This space is broken up into areas of land, water, countries, states, communities, and people. Location is the "where" part of the geography puzzle. The exact location of an area is called absolute location. The latitude and longitude of your state are also absolute locations. They also locate places on Earth based on surrounding features. Relative location is a general location. For example, your state may be close to the East Coast of the United States. Your house may be thirty minutes away from New York City. Geographers use time, landmarks, direction, and distance to tell where places are located. All of the areas on Earth have special characteristics or qualities. These qualities make places both the same as and different from other places. The physical characteristics of a place are its landforms. These are mountains, lakes, rivers, plains, and oceans. There are also human characteristics of places. Buildings, roads, houses, temples, and churches are all human characteristics. They use these characteristics to learn more about places and the people who live there. Paragraphs 4 to 8: For the complete story with questions:

Chapter 4 : Environment Interactions Worksheets - Printable Worksheets

This Human-Environment Interaction Worksheet is suitable for 6th - 8th Grade. In this geography worksheet, students find the missing word or phrase that best completes each of the 10 sentences in the paragraph about human-environment interaction.
