

Chapter 1 : inventing the criminal | Download eBook PDF/EPUB

Inventing the Criminal provides a well-researched overview of the development of German criminological thought. Bulletin of the History of Medicine Wetzell has added to this new historical literature on particular realms of German life under Nazism with a book that investigates the history of the discipline of criminology from the late.

In lieu of an abstract, here is a brief excerpt of the content: *Bulletin of the History of Medicine A History of German Criminology, Studies in Legal History. University of North Carolina Press,* Given the sinister importance of law enforcement in early-twentieth-century German history, it is surprising that no comprehensive study has been written until now on German criminological theory. Wetzell argues that despite the increasingly eugenic discourse that marked German social policy and ultimately led to abuses in the [End Page] Third Reich, German criminology remained relatively resistant to crude biological determinism. Criminologists such as Emil Kraepelin and Julius Koch preferred psychological explanations that linked crime to mental illness under the banner of "criminal psychology. While some Weimar criminologists sought to launch a "criminal-sociological" school that emphasized the importance of environment, so-called criminal biology emerged as the dominant theory in the s. Eventually supported by most major German criminologists, including Gustav Aschaffenburg, Johannes Lange, and Friedrich Stumpf, criminal biological theory maintained that criminality was caused by a mixture of hereditary personality traits and environmental influences. Criminal biology became fixated on the search for a criminal gene, yet Wetzell demonstrates that most Weimar criminologists remained true to scientific principles, and as their methodology became more sophisticated, they admitted that the interplay between heredity and milieu was too complex for them to proclaim the discovery of clear hereditary factors in criminality. Ironically, Wetzell points out, the "increasing sophistication of criminal biologists made their goal harder to reach" p. With the Nazi seizure of power, many German criminologists sought to emphasize the hereditary aspects of their research in order to demonstrate their compatibility with the biological politics of the Third Reich. A number became Nazi party members and supported such Nazi measures as preventive detention, sterilization of the mentally ill, and the planned Community Alien Law. Yet most criminal biologists maintained a sophisticated methodological approach to their work that undermined any facile notions of hereditary determinism. Most Nazi-era criminologists did not link crime to race. In an especially fascinating chapter on criminology and eugenics, Wetzell effectively shows that criminologists only half-heartedly supported the forced sterilization of criminals, and they prevented the inclusion of prisoners in the scope of the sterilization law on the grounds that the direct connection between criminality and heredity had not been satisfactorily established. *Inventing the Criminal* provides a well-researched overview of the development of German criminological thought although it is unfortunate that two of the more colorful personalities in this field, the National-Bolshevist Hans von Hentig and the socialist Rainer Fetscher, make only brief appearances , and it addresses a fundamental problem at the heart of the history of medicine and science in Germany--namely, the task of disentangling elements of Weimar science that were comparatively "normal" from those that pushed the German eugenic project into murder under the Nazis. Wetzell convincingly demonstrates how the [End Page] scientifically professional German criminological community upheld scientific methodology, and yet also embraced dubious notions of hereditary criminality. Chapter 3 : Project MUSE - Inventing the Criminal: A History of German Criminology, (review)

Inventing the Criminal makes a major contribution to our knowledge of criminological discourse. Andrew Lees, Rutgers University Wetzell's elegantly argued book offers a provocative but convincing history of the fate of biological determinism in Germany.

Chapter 4 : Ebook Inventing The Criminal: A History Of German Criminology,

Recent years have witnessed a resurgence of biological research into the causes of crime, but the origins of this kind of research date back to the late nineteenth century.

Chapter 5 : Inventing the Criminal : Richard F. Wetzell :

For whatever reasons, though "Inventing the Criminal" is a tedious slog. It offers nothing new, despite the heavy research of "Class, today instead of visiting the box factory, we'll be visiting the box factory".
