

Chapter 1 : PubMed Journals will be shut down | NCBI Insights

About This Journal. Journal of Applied Gerontology (JAG), peer-reviewed and published monthly, provides an international forum for information that has clear and immediate applicability to the health, care, and quality of life of the elderly.

Seungyoun Kim, Bob G Knight Using a model of resilience, this study compared the direct and indirect associations between resilience resources sense of mastery, openness to experience, emotion regulation, and social support and life satisfaction among caregiving subgroups spouses, adult-children, and parents. Estimates of direct and indirect relationships between the resources and life satisfaction were calculated for each subgroup, and differences in the relationships between subgroups were tested Journal of Applied Gerontology: Yaena Min, Patricia W Slattum Concerns about sleep problems and falls in older adults are significant. This article reviews the association between sleep problems and falls in community-dwelling adults aged 65 years or older. Multiple databases were searched from inception until using sleep, sleep disorders, and falls as keywords, limiting to studies published in English in peer-reviewed journals. After screening and assessing for eligibility, 18 articles were selected based on the inclusion and exclusion criteria. Findings of an association between sleep problems and risk of falls are conflicting, but some specific sleep problems such as extremely short sleep duration, daytime sleepiness and naps appear to be significantly related to falls in older adults Carri Casteel, Jennifer Jones, Paula Gildner, James M Bowling, Susan J Blalock The objectives were to examine falls risk factors to determine how the magnitude of risk may differ between homebound and non-homebound older adults, and to describe falls prevention behaviors and participation in falls prevention education. Data were collected during home visits and included an interview and medication inventory We surveyed independent older women from continuing care retirement communities and non-institutional homes. Shelly L Jackson The financial exploitation of older adults has garnered the attention of society as well as state and federal governments in a way that elder abuse has never been able to achieve. It is frequently asserted that financial exploitation deserves this attention in part because it is the most prevalent form of elder abuse. This article systematically reviews the measurement of financial exploitation in comparison with other forms of elder abuse and concludes that its measurement is considerably more variable than other forms of abuse Evidence From the Health and Retirement Study. Lien T Quach, Jeffrey A Burr The aims of this study were to examine the association between different types of arthritis and falls and to investigate whether clinically significant depression symptoms CSDS moderate these relationships. About one third had some form of arthritis: In-depth, semistructured interviews were conducted with 22 experienced nurses in Israel, who worked with older adults engaged in self-neglectful behaviors in the community Gilbert Gimm, Syeda Chowdhury, Nicholas Castle This article estimates the prevalence and identifies risk factors of resident aggression and abuse in assisted living facilities. We conducted multivariate analyses of resident-level data from an analytic sample of 6, older Americans in the National Survey of Residential Care Facilities. We describe the video production process of two prototypes in the long-term care LTC setting and discuss lessons learned around developing this type of intervention. Partnering with an LTC community allowed us to create videos on-site, document staff time, handle any barriers with video production, and evaluate the process. This study contributes to the body of literature examining smoking cessation and body mass index BMI for adults aged 50 and older. Older adults undergo a small change in BMI after a transition from smoking to nonsmoking during a 6-year period, and this occurs after accounting for individual-level unobserved heterogeneity This study tests hypothesized associations between perceived social support, social network size, and financial exploitation FE. The same associations were found for FE in the last 6 months The Cornell Research-to-Practice RTP Consensus Workshop Model is a strategy for bridging the gap between aging research and practice but lacks a technique for evaluating the relative importance of ideas. This project assessed the feasibility of adding a quantitative survey to the RTP model to address this gap. Who Are We Reaching? Agathe Lorthios-Guillement, Manon Parisien, Karen Nour, Baptiste Fournier, Danielle Guay, Nathalie Bier This exploratory study examines the reach of Jog Your Mind, a multifactorial community-based

program promoting cognitive vitality among seniors with no known cognitive impairment. The aim was to determine whether the program successfully reached its target population and to compare the characteristics of participants sociodemographic, health, lifestyle, attitudes, and cognitive profile with the general population of seniors. Twenty-three community organizations recruited community-dwelling seniors willing to participate in the program. Characteristics, content, and technical aspects of 36 apps in the U.S. Few apps had an app community. This study describes methods and associated costs of recruiting low-income, cognitively intact, older adults with functional difficulties into this study. Changes in state Medicaid home care policy generosity may result from changes in the number of persons served. This study measures state Medicaid home care Participation and Intensity comprehensively using latent variables, and uses those latent variables to describe changes in Medicaid home care policy generosity over time and across states.

Chapter 2 : Recent papers in Journal of Applied Gerontology | MetaTOC

Journal of Applied Gerontology is the official journal of the Southern Gerontological Society. It features articles that focus on research applications intended to improve the health and quality of life of older persons or to enhance our understanding of age-related issues that will eventually lead to such outcomes.

Chapter 3 : SAGE Nursing and Other Health Specialties (Journal of Applied Gerontology)

Browse all issues of Journal of Applied Gerontology. Access to society journal content varies across our titles. If you have access to a journal via a society or association membership, please browse to your society journal, select an article to view, and follow the instructions in this box.

Chapter 4 : Journal of Applied Gerontology

Journal of Applied Gerontology is a peer-reviewed academic journal that publishes papers in the field of Applied Gerontology. The journal's editor as of August 1, is Julie Robison (University of Connecticut).

Chapter 5 : Journal of Applied Gerontology | Revolv

Journal description. Journal of Applied Gerontology publishes articles in all subdisciplines of ageing whose findings, conclusions or suggestions have clear and sometimes immediate applicability.

Chapter 6 : Journal of Applied Gerontology - Wikipedia

The Journal of Applied Gerontology (JAG) is the official journal of the Southern Gerontological Society. It features articles that focus on research applications intended to improve the quality of life of older persons or to enhance our understanding of age-related issues that will eventually lead to such outcomes.

Chapter 7 : Journal Rankings on Geriatrics and Gerontology

Journal of Applied Gerontology journal page at PubMed Journals. Published by Sage Publications for the Southern Gerontological Society.

Chapter 8 : Journal of Gerontology | Oxford Academic

The Journal is devoted to the publication of articles that focus on research applications intended to improve the quality of life of older persons or to enhance our understanding of age-related issues that will eventually lead to such outcomes.

Chapter 9 : Journal of Applied Gerontology - Journal Resources for Authors - Michigan PSC

2. *Journal of Applied Gerontology XX(X) Introduction. With aging into older adulthood, several cognitive and neurological deficits can influence daily living activities and risk for physical injury.*
