Email Copy Link Copied Is your boyfriend acting a bit strange whenever your best friend comes over? Do you have an annoying bit of intuition tugging at your gut? It could very well be that your intuition is right and your boyfriend is secretly thinking about sleeping with your best friend. Looking at and thinking about other people is only natural. You have probably thought about it, too. Did you go ahead and cheat on your boyfriend with his friend? Probably not, and the odds are that your boyfriend will follow through on his fantasies are hopefully pretty slim, too. But do not take it out on your friend if she is innocent in all this. Either way, whether he is actually thinking about cheating or he is just having healthy, adult fantasies, here are 15 signs that he might want to sleep with your best friend. Normally you would be thrilled to have her long, but you wanted tonight to just be about you and your boyfriend. This could be a sign that your boyfriend wants to sleep with your best friend, but it could also just be that he is being considerate. He knows how much you love spending time with your best friend and the new bar opening would be a lot of fun with another person in the mix. So when your boyfriend asks you to stop hanging out with her, the paranoia bells start ringing in your head. What if he wants to hang out with her instead? What if she is too much of a temptation for him? If your boyfriend wants you to stop being friends with your bestie, it is time to get to the bottom of the situation. Is he controlling and does he demand your complete attention? If that is not the case, then you need to sit down and have a talk with him to find out why he wants to break up your friendship. At first he seems bored, but then he stops to look at a picture of your best friend with her previous boyfriend. You tell him about the story of her previous boyfriend and then he begins asking you about all her other boyfriends. Why should he care? Your boyfriend may be trying to compare himself to her other boyfriends, seeing if he would have a chance with your best friend, but he could also just be looking for some gossiping fun. While men are loathe to admit it, they love gossip just as much as we do. Yes, men do look at other women and they will sometimes want you to dress a little differently when the two of you are out together. He may be lusting after your best friend, but he might also just want you to look your best so he can show you off. Consider consulting him about your outfit choices before going out. It could help spice up his fantasies about you and pull his attention back to what you are wearing instead of what your best friend has on. The next day he tells you that he was texting your best friend. On the nicer side of things, he may be extending his friendship to her because she is your best friend, but on the darker side, he really should not be texting YOUR best friend in the middle of the night. Have a talk with both of them separately and see what is going on. Explain how the secret texting makes you feel. If it continues, you may have some hard decisions to make. The time is coming up for the big parent meet, but when you finally meet his mother you discover that she has already met your best friend. What is up with that? It would be easy to get upset over this situation, but you need to step back and find out what is going on. It may be that he introduced your best friend first as a rehearsal before he introduces his biggest prize: Either way, keep your eyes and ears open for other signs that he may be interested in your best friend. What is worse is that he is always taking her side and not yours. He might also be simply enjoying getting a rise out of you and he knows that in the end you can handle it. If it really bothers you, talk to him about it and see what he has to say. He might be interested in your best friend, but he has to realize that if he continues to hurt your feelings, you are going to let him go.

Chapter 2 : Daydreams Quotes (41 quotes)

Love's fancies, from Day dreams. by Knox, Carleton Everett. [from old catalog] Publication date Publisher Kansas City, Mo., Walkenhorst printing co.

Hysterical Fancies and their Relations to Bisexuality. Furthermore, through numerous communications we became acquainted with the peculiar organizations by means of which certain perverts put into operation their sexual gratifications, be it in fancy or reality. On the other hand it may sound rather novel to some to hear that quite analogous psychic formations regularly appear in all psychoneuroses, especially in hysteria, and that these so called hysterical fancies show important relations to the causation of the neurotic symptoms. Of the same source and of the normal prototype are all these fantastic creations, so called reveries of youth, which have already gained a certain consideration in the literature, though not a sufficient one. Yet even in men the significance of the erotic moment is not to be put in the second place, for one examining more closely the reveries of men we generally learn that all these heroic acts are accomplished, that all these successes are acquired in order to please a woman and to be preferred to other men. They are justly named " day dreams " for they give the key for the standing of night dreams in which the nucleus of the dream formation is produced by just such complicated, disfigured day fancies which are misunderstood by the conscious psychic judgment. On the street however, the day dreamer can be readily recognized by a sudden, as if absent-minded smile, by talking to himself, or by a running-like acceleration of his gait wherein he designates the acme of the imaginary situation. All hysterical attacks which I have been thus far able to examine proved to be such involuntary incursions of day dreams. Observation leaves no doubt that such fancies may exist as unconscious or conscious and whenever they become unconscious they may also become pathogenic, that is, they may express themselves in symptoms and attacks. Under favorable conditions it is possible for consciousness to seize such unconscious fancies. One of my patients whose attention I have called to her fancies narrated that once while in the street she suddenly found herself in tears, and rapidly reflecting over the cause of her weeping the fancy became clear to her. She fancied herself in delicate relationship with a piano virtuoso familiar in the city, but whom she did not know personally. In her fancy she bore him a child she was childless , and he then deserted her, leaving her and her child in misery. At this passage of the romance she burst into tears. The unconscious fancies are either from the first unconscious, having been formed in the unconscious, or what is more frequently the case they were once conscious fancies, day dreams, and were then intentionally forgotten, merging into the unconscious by "repression. The unconscious fancy stands in a very important relation to the sexual life of the person, it is really identical with that fancy which helped it towards sexual gratification during a period of masturbation. The masturbating act in the broader sense the onanistic then consisted of two parts, the evocation of the fancy, and the active performance of self gratification at the height of the same. This combination is familiarly in itself a soldering. Later this action blended with a wish presentation from the sphere of the object loved, and served for a partial realization of the situation in which this fancy culminated. If, then, the person forgoes in this manner the masturbo-fantastic gratification, the action remains undone, the fancy, however, changes from a conscious to an unconscious one. If no other manner of sexual gratification occurs, if the person remains abstinent and does not succeed in sublimating his libido, that is, in diverting the sexual excitement to a higher aim, we then have the conditions for the refreshment of the unconscious fancy; it grows exuberantly and with all the force of the desire for love at least a fragment of its content becomes a morbid symptom. The unconscious fancies are then the nearest psychical first steps of a whole series of hysterical symptoms. The hysterical symptoms are nothing other than unconscious fancies brought to light by "conversion," and insofar as they are somatic symptoms they are frequently enough taken from the spheres of the sexual feelings and motor innervations which originally accompanied the former still conscious fancies. In this way the disuse of onanism is really made retrograde, and the final aim of the whole pathological process, the restoration of the primary sexual gratification, though it never becomes perfect, in a manner always achieves a certain approximation. The interest of him who studies hysteria turns directly from the symptoms to the fancies from which the former originate. In this way it

was found that the unconscious fancies of hysterics perfectly correspond in content to the consciously performed gratification situations of perverts. Those who lack examples of such nature need only recall the historical managements of the Roman Caesars whose frenzies were naturally only conditioned by the unrestricted fullness of the fancy creators. The delusional formations of paranoiacs are of the same nature, they are fancies which directly become conscious, and which are borne by the masochistic-sadistic components of the sexual impulse. Complete counterparts of these can also be found in certain unconscious fancies of hysterics. It is a familiar, practically significant fact that hysterics express their fancies not as symptoms but in conscious realization, and in this way they feign and commit murders, assaults, and sexual aggressions. All that can be found out about the sexuality of the psychoneurotic can be ascertained by the psychoanalytic examination which leads from the obtrusive symptoms to the hidden unconscious fancies; herein, too, is the fact, the communication of which will be put in the foreground of this short preliminary publication. Probably in view of the difficulties which prevent the effort of the unconscious fancies from expressing themselves, the relation between the fancies to the symptoms is not simple but rather manifoldly complicated. To be sure in the beginning of the disease all these complications are not developed. For the sake of general interest I pass over the connection of this communication and insert a series of formulae which strive to progressively exhaust the nature of hysteria. They do not contradict one another but correspond partly to more complete and sharper conceptions, and partly to the use of different points of view. The hysterical symptom is the memory symbol of certain efficacious traumatic impressions and experiences. The hysterical symptom is the compensation by conversion for the associative return of the traumatic experience. The hysterical symptom "like all other psychic formations" is the expression of a wish realization. The hysterical symptom is the realization of an unconscious fancy serving as a wish fulfillment. The hysterical symptom serves as a sexual gratification, and represents a part of the sexual life of the individual corresponding to one of the components of his sexual impulse. The hysterical symptom, in a fashion, corresponds to the return of the sexual gratification which was real in infantile life but had been repressed since then. The hysterical symptom results as a compromise between two opposing affects or impulse incitements, one of which strives to bring to realization a partial impulse, or a component of the sexual constitution, while the other strives to suppress the same. The hysterical symptom may undertake the representation of diverse unconscious non sexual incitements, but can not lack the sexual significance. It is the seventh among these determinations which expresses most exhaustively the essence of the hysterical symptom as a realization of an unconscious fancy, and it is the eighth which properly designates the significance of the sexual moment. Some of the preceding formulae are contained as first steps in this formula. In view of these relations between symptoms and fancies one can readily reach from the psychoanalysis of the symptoms to the knowledge of the components of the sexual impulse controlling the individual, just as I have shown in the "Three Contributions to the Sexual Theory. It shows that many symptoms can not be solved by one unconscious sexual fancy or by a series of fancies in which the most significant and most primitive is of a sexual nature, but in order to solve the symptom two sexual fancies are required, one of the masculine and one of the feminine character, so that one of these fancies arises from a homosexual impulse. The axiom pronounced in formula seven is in no way effected by this novelty, so that a hysterical symptom necessarily corresponds to a compromise between a libidinous and a repressed emotion, but besides that, it can correspond to a union of two libidinous fancies of contrary sex characters. I refrain from giving examples for this axiom. Experience has taught me that short analyses compressed into the form of an abstract can never make the demonstrable impression for which they were intended. The communication of fully analyzed cases must be reserved for another place. I therefore content myself in formulating the axiom and in elucidating its significance: An hysterical symptom is the expression, on the one hand, of a masculine, and on the other hand of a feminine unconscious sexual fancy. I expressly observe that I am unable to adjudge to this axiom the similar general validity that I claimed for the other formulae. As far as I can see it is met neither in all symptoms of a single case, nor in all cases. On the contrary it is not difficult to find cases in which the contrary sexual emotions have found separate symptomatic expression, so that the symptoms of hetero- and homosexuality can be as sharply distinguished from each other as the fancies hidden behind them.

Nevertheless, the relation claimed in the ninth formula occurs frequently enough, and wherever it is found it is of sufficient significance to merit a special formulation. It seems to me to signify the highest stage of complexity to which the determination of hysterical symptoms can reach, and can only be expected in a long standing neurosis and where a great amount of organization has occurred. Other counterparts are found in certain hysterical crises in which the patients play both roles lying at the basis of sexual fancies; thus, for example, one of the cases under my observation presses his garments to his body with one arm as woman, and with the other arm he attempts to tear them off as man. This contradictory simultaneity determines most of the incomprehensibility of the situation otherwise so plastically represented in the attack, and is excellently suited for the concealment of the effective unconscious fancy. In psychoanalytical treatment it is very important to be prepared for the bisexual significance of a symptom. It should not be at all surprising or misleading when a symptom remains apparently undiminished in spite of the fact that one of its sexual determinants is already solved. Perhaps it is still supported by the unsuspected contrary sexual. Furthermore during the treatment of such cases we can observe how the patient makes use of this convenience. During the analysis of the one sexual significance he continually switches his thoughts into the sphere of the contrary significance just as if onto a neighboring track. Freud, *Traumdeutung*, 2d ed. Ellis similarly expresses himself, 1. *Erill*, The Macmillan Co. Sadger, who recently discovered this sentence in question, independently by psychoanalysis, claims for it a general validity *Die Bedeutung der psychoanalytische Methode nach Freud*, Zentralbl.

Chapter 3 : Ten Things: Daydreams | Lovely Indeed

Fancies Flower Shop is a Local Florist in Rapid City, South Dakota. For Beautiful Arrangements and Delivery, Contact Us Today!

They open a realm of extreme curiosity and oddities that us as humans are always trying to decode. And when you throw certain people and events into the mix, dreams become all that more astonishing and questionable. What are these messages hidden in our dreams trying to tell us, anyways? There are many, many reasons why you might be dreaming about someone in particular. What is your subconscious mind trying to tell you? The simplest reason could be that you simply fell asleep while thinking about this certain person. On the other hand, your dream might not even be about this person. It may be something much deeper. Your dream could also represent the relationship you had with someone. Dreaming About Someone You Like: However, pay close attention to what happens IN the dream. Did they like you back? This means that you are secure in yourself and have confidence. Dreaming About Someone You Love: Dreaming about someone you love, more often than not, will show you how deep your love and passion is with this individual. Look to find the root of why you dreamt your lover with another person and build from that. These dreams could either represent something very positive, or something negative. It all depends on what happened in the dream. For starters, a deceased person whom you were close to may visit you in a dream to offer you some comfort and closure. Did you have an issue with this person before they died? Maybe that issue was resolved at some point during your dream. Are you going through a rough patch in your life? Maybe this person has returned to give you some great comfort and give you some guidance on what you should do next. There are some spiritual theories that suggest some deceased individuals will return to disclose the location and reason of their death to those closest to them. They may disclose to you who did it. Was their body never found? They may tell you where the body was hidden. Depending on circumstances, it might be an insight that needs to be followed up with authorities. Dreaming About Someone in a Sexual Way: Your subconscious paired the two and left you with such a dream. Dreaming About Someone Famous: The first most common interpretation is that you wish to better yourself or do what this individual is doing. On the other hand, dreaming about someone famous is also a way for us to get over disappointments in our lives: Other Reasons You Might Dream About Someone Sometimes when you dream about someone- no matter who it is- it has absolutely no correlation to the actually individual. Sometimes these dreams are meant to help you see through problems, get over a bad experience, or bring you hope and joy. Never read too deep into the actual person- pay more attention to what is going on in the dream and how the dream made you felt. What do you think the dream meant, and how did it make you feel?

Chapter 4 : she's always dreaming " when you're daydreaming and wonder how the fuck

Excerpt from Love's Fancies, From Day Dreams If I can find you at the end of the day. What care I tho the labor be My work will be play; my night turned to day; My progress will nothing retard.
