Chapter 1 : List of Macintosh games - Wikipedia

Macintosh 3d Handbook/Book and Disk [Craig Lyn] on racedaydvl.com *FREE* shipping on qualifying offers. This comprehensive book/CD package contains hundreds of practical tips, techniques and lessons for rendering professional 3D graphics on the Macintosh.

Create a disk image using Disk Utility on Mac You can use Disk Utility to create a disk image , which is a file that contains other files and folders. Create a blank disk image for storage You can create an empty disk image, add data to it, then use it to create disks, CDs, or DVDs. Enter a filename for the disk image, add tags if necessary, then choose where to save it. This is the name that appears in the Finder, where you save the disk image file before opening it. In the Name field, enter the name for the disk image. This is the name that appears on your desktop and in the Finder sidebar, after you open the disk image. In the Size field, enter a size for the disk image. Click the Format pop-up menu, then choose the format for the disk: If the disk image will be used with a Mac with macOS To encrypt the disk image, click the Encryption pop-up menu, then choose an encryption option. Click the Partitions pop-up menu, then choose a partition layout. Click the Image Format pop-up menu, then choose an option: Sparse bundle disk image: Same as a sparse disk image below , but the directory data for the image is stored differently. Creates an expandable file that shrinks and grows as needed. No additional space is used. Changes the size of the image to MB CD 8 cm. Click Save, then click Done. Disk Utility creates the disk image file where you saved it in the Finder and mounts its disk icon on your desktop and in the Finder sidebar. In the Finder, copy your files to the mounted disk image, then eject it. For more information about disk image types, see the manual man page for hdiutil. Create a disk image from a disk or connected device You can create a disk image that includes the data and free space on a physical disk or connected device, such as a USB device. You can then restore that disk image to another volume. In the Disk Utility app on your Mac, select a disk, volume, or connected device in the sidebar. Click the Format pop-up menu, then choose an option: Compresses data, so the disk image is smaller than the original data. The disk image is read-only. Can be used with third-party apps. The disk image may not serve as a reliable backup. Create a disk image from a folder or connected device You can create a disk image that contains the contents of a folder or connected device, such as a USB device. Select the folder or connected device in the dialog that appears, then click Open. Click the Format pop-up menu, then choose a format: Click the Encryption pop-up menu, then choose an encryption option. Enter and re-enter a password to unlock the disk image, then click Choose. Use the default settings for the rest of the options: In the Finder , copy the documents you want to protect to the disk image. To access the data in a disk image, double-click it. It appears on your desktop, and you can add, remove, and edit files on it just as you would with a disk.
