Chapter 1 : Quick Start Build a Map | Maps Embed API | Google Developers

For example, they may be displayed after you click on a static image of a map embedded in an article, or on the maps link in Commons (in the camera location section) such as this example image and associated map. You should keep the credit section in the lower right corner of dynamic maps.

This also means that interactions with the map, such as starring a location, are saved for easy viewing in Google Maps for desktop or mobile. The ad format and the set of ads shown in any given map may change without notice. Before you start developing with the Maps Embed API, review the usage and billing information you need to enable billing on your project. Basic Map Modes Note: See usage and billing for details. Specify which map mode to use in the request URL. Place mode Place mode displays a map pin at a particular place or address, such as a landmark, business, geographic feature, or town. It accepts a location as either a place name, address, or place ID. Attributed Save A user who is logged into their Google account will be able to save the place indicated by the q parameter. Saved places will be visible on other Google maps on the web or mobile devices. By default, places saved from an embedded map will include attribution information to remind users where they were when they saved that place. You can personalize the attribution with the following parameters. Defaults to the URL path of the page on which the map appeared, for example: The attribution will appear as a URL. The example below uses the optional matype parameter to display a satellite view of the map. Advanced Map Modes Note: Directions mode Directions mode displays the path between two or more specified points on the map, as well as the distance and travel time. The value can be either a place name, address or place ID. The following URL parameters are optional: Multiple waypoints can be specified by using the pipe character to separate places e. You can specify up to 20 waypoints. Each waypoint can be either a place name, address or place ID. Options are driving, walking which prefers pedestrian paths and sidewalks, where available , bicycling which routes via bike paths and preferred streets where available , transit, or flying. If no mode is specified, the Maps Embed API will show one or more of the most relevant modes for the specified route. Separate multiple values with the pipe character e. If units are not specified, the origin country of the query determines the units to use. Google Street View provides panoramic views from designated locations throughout its coverage area. User contributed Photospheres , and Street View special collections are also available. Each Street View panorama provides a full degree view from a single location. Images contain degrees of horizontal view a full wrap-around and degrees of vertical view from straight up to straight down. The streetview mode provides a viewer that renders the resulting panorama as a sphere with a camera at its center. You can manipulate the camera to control the zoom and the orientation of the camera. The API will display the panorama photographed closest to this location. If you specify a pano you may also specify a location. Positive values will angle the camera up, while negative values will angle the camera down. For example, an image taken on a hill will likely exhibit a default pitch that is not horizontal. When dealing with a fixed-size viewport the field of view is can be considered the zoom level, with smaller numbers indicating a higher level of zoom. By default, visitors will see UI elements in their own language. Accepts a region code specified as a two-character ccTLD top-level domain value. Search mode Search mode displays results for a search across the visible map region. Optional parameters The following optional parameters can be used with any of the map modes listed above. It accepts a comma-separated latitude and longitude value such as Accepted values range from 0 the whole world to 21 individual buildings. The upper limit can vary depending on the map data available at the selected location. Note that this parameter is only supported for some country tiles; if the specific language requested is not supported for the tile set, then the default language for that tileset will be used. By default, visitors will see a map in their own language. Place IDs are stable way to uniquely identify a place. The following code specifies New York City Hall as the origin for a directions request: Valid values are non-negative integers. Default value is Indoor collections are not included in search results. Note that outdoor panoramas may not exist for the specified location. Add

allowfullscreen to your iframe properties to allow certain map parts to go full screen. You can resize the iframe to suit the structure and design of your own website, but we find that visitors usually find it easier to interact with larger maps. Note that embedded maps are not supported below a size of px in either dimension. Signed-in users are identified by their Google cookie, which is also used to provide a personalised experience. For users that are not signed in, Google uses an anonymous cookie for each unique user. Google also accumulates statistics about the types of features used from the Maps product. Chapter 3 : Learn “ Education “ Google Maps

Draw. Add points or draw shapes anywhere. Search. Find places and save them to your map. Import. Instantly make maps from spreadsheets.

Get HTML-Code Embed a Google Map Google Maps is the most popular online mapping service with interactive zooming and panning, directions, location details, satellite views, and degree street level panoramas. It has a smooth moving, easy to use interface that is regularly updated with new features. Part of why the maps have become so ubiquitous is that they provide a way for anyone to embed a map within their own website. They look polished and add an air of tech savviness and professionalism to your site. Why embed Google Maps on your site? You can include a Google Map on your site that includes a pin dropped at the address of a location. This is useful for your own business, but can also be used by bloggers, reviewers, and other websites that discuss specific establishments. They can also be used for more general overviews of a neighborhood or area. Embedding a google map offers your visitors a lot of benefits. Just another day at Googleplex, Mountain View. It helps customers get directions. By adding a map on your site, it saves customers the steps of opening maps in another window and copying over the address. They can simply click on your map address and get directions. Make it easy to find business contact information. The data that comes up with a business overview includes an address, phone number, website, and other data that Google knows. This makes it easy for customers to access your information right when they need it. It allows your site visitors to actually see where each point is, making it clearer to understand and easier to plan. Include a street view picture of a location. Since Google Maps have street level views of nearly every location on all but the most minor roads, the Street View images can be included to help people see what a location will look like if they arrive. It keeps visitors on your site. Whatever they want to know about a location, they can find it in the map while remaining on your site instead of leaving for the Google site. Embedding a Google Map with embedgooglemap. Just put in an address, select a few details of how you want your map to appear, and get the code. Then, just paste that into your website where you want the map to appear.
