

Chapter 1 : X-kit Achieve! Grade 11 Mathematics Study Guide | X-Kit Achieve!

Study & Master Mathematical Literacy Study Guide for CAPS has been developed as an aid to support you throughout your school year. Not only does this study guide give you an overview of the content required to master Mathematical Literacy, it also: explains the key concepts you need to fully understand the subject matter provides examples with complete answers, to help you learn good problem.

October Minor revisions Third Edition: Box Sanlamhof, Tel: University of the Witwatersrand The author has 13 years of teaching experience in both government and private schools. She is currently the Examiner for Paper 1 for the I. She currently teaches at Clifton School in KwaZulu-Natal while also facilitating training workshops for both learners and teachers nationally, develops resources, and appears on educational channels on television. She has taught Mathematical Literacy for 6 years and has facilitated several workshops for learners, teachers and subject advisors. She did a series covering all sections of Grade 11 and 12 Mathematical Literacy which is screened on the SABC Learning Channel as well as weekly revision lessons which were broadcast on Radio She has 33 years of teaching experience with 13 years being in the Private School Sector. Annette enjoys reading, spending weekends at the Vaal Dam, travelling, and a new hobby, diving. The purpose of this publication is to cover all learning outcomes and assessment standards using a user-friendly, systematic approach. Each sub-section starts with teaching the skill and progresses into a context based application. Many educators have commented that the current textbooks on the market begin by presenting a complex scenario within which the learner must apply many different skills they have not yet learned. This approach also means educators and learners are jumping from Outcome to Outcome. While combining skills from various outcomes certainly has its place, we felt it less stressful on the learners and educators to work in a structured way, through the skills first, and once mastered, apply those to different scenarios. Many educators have said current textbooks on the market tend to cover too much content or do not deal with some of the assessment standards at all. Some textbooks deal with content not required in the learning outcomes. This means that educators have to use a variety of textbooks in creating suitable lessons for their learners, which can be extremely time-consuming, and with all the various contexts used “ can also be quite daunting. This textbook focuses on ALL the core assessment standards only. This publication helps you to cover what is required and prevents you getting caught up in a particular assessment standard. This allows for more time to assess learners effectively, which is the heart of the new curriculum. This publication has been tested in the classroom by the authors. Educators are able to focus on the basic skills necessary at this level, which in turn enables the learners to apply their knowledge to any given scenario. All the skills covered in this textbook easily fit within most time constraints leaving room for both revision and extension. One of the biggest challenges educators currently have is the confusion around the taxonomy of thinking levels. This publication includes what thinking level each question is “ a huge time saving aspect. This publication includes user-friendly assessment tasks within each section. These tasks include both long and short investigations, assignments, projects, tests and other forms of alternative assessments which can all be used to meet the portfolio requirements of the NCS. As this is a workbook, learners save valuable time by working in the book. The focus can be on answering the question not on rewriting reams of information. It has a unique place in my teaching in that when remediation, reinforcement and designing of tasks needs to be done, it is the first source I pick up. It is uncluttered and the layout is quite simple which encourages the learners. The explanations and examples are very good. The graded questions, with their cognitive levels, have helped in understanding which types of questions belong in each of the levels. The Assessment Standards are dealt with very thoroughly which makes teaching and learning the skills very clear. The learners have found this a very useful tool in the Mathematical Literacy classroom. It has been written in such a way that you will finally learn to love Maths! Yes, it is possible! When you look through the textbook you will see that it is laid out in a very simple way, so you never have to feel intimidated or overwhelmed by the Maths that you will be doing. This maths is fun! This maths is practical! You will find that because you can relate to this maths, you will be able to do it! There are other skills that you still need to know but they become integrated with the other
