

## Chapter 1 : LIGHT & ULTRALIGHT BACKPACKING

*Jolly Green Giant looks northward to the interstate. Jolly Green Giant. Blue Earth, Minnesota Casting a long shadow from a body built by healthy vegetables, the Jolly Green Giant towers head-and-husk above most highway leviathans.*

Five crew were standard, including a pilot, copilot, crew chief, and two pararescuemen. Other changes included more armor and a more comprehensive suite of radios to improve communications with C tankers, attack aircraft supporting CSAR actions, and aircrews awaiting rescue on the ground. Late in the war they were fitted with countermeasures pods to deal with heat-seeking missiles. As with the HHB, the HHC was also used for covert operations and snagging reentry capsules, as well as snagging reconnaissance drones. A few were assigned to support the Apollo space program, standing by to recover an Apollo capsule in case of a launchpad abort, though such an accident never happened. The CHC was apparently very similar to the HHC, even retaining the rescue hoist, the most visible difference being that the CHC did not have an in-flight refueling probe. All were delivered in and The improvements featured by the HHH included: It was further modified to be able to give terrain avoidance and terrain following commands simultaneously first aircraft capable of this unique feature. A computerized moving-map display. The HHH could be fitted with 27 seats for troops or 14 litters. The upgrades were performed by the Navy in Pensacola, reflecting the fact that the Navy handled high-level maintenance on Air Force Ss. They were then reclassified as "special operations" machines and accordingly given a new designation of MHH. There were some avionics upgrades as well, including fit of a modern Global Positioning System GPS satellite navigation receiver. The terrain-following and terrain-avoidance radar , forward looking infrared sensor, inertial navigation system with Global Positioning System, along with a projected map display enable the crew to follow terrain contours and avoid obstacles, making low-level penetration possible. It also can engage in combat search and rescue missions. Low-level penetration was made possible by a state-of-the-art terrain following radar, as well as infrared sensors that allow the helicopter to operate in bad weather. It was equipped with armor plating. The system enhanced the defensive capabilities of the Pave Low. It provided instant access to the total battlefield situation, through near real-time Electronic Order of Battle updates. It also provided a new level of detection avoidance with near real-time threat broadcasts over-the-horizon , so crews can avoid and defeat threats, and replan en route if necessary. It was used for CSAR, covert combat operations, and "snagging" reentry capsules from photo - reconnaissance satellites. Super Jollies operating in front-line service were painted in various camouflage color schemes, while those in stateside rescue service were painted in an overall gray scheme with a yellow tailband. During the operation, MHJs conducted missions including reconnaissance, small team insertion, medivac, logistics, and fire support. These MHMs were retired shortly thereafter.

*I know, you'll find other versions of this tune on YouTube, but this vinyl rip is the best in quality. You know them, so enjoy!*

My initial reaction was that a backpack of this type, and one not commonly associated with the lightweight backpacking cottage community, was likely not in my own interests or that of my readers. However, the more I thought about it, and reflecting on the tangible stagnation within the lightweight community over the last few years, I decided to put my biases aside and give it a shot to see where it may fit in to my gear closet. Outdoor Products is best known to me as a Walmart staple in their sporting goods section. Like Coleman goods, Outdoor Products is widely accepted as a brand for the budget-conscious outdoor sports participant. They offer a fairly broad range of products including backpacks, hydration sleeves, waist packs, luggage, duffel bags, outdoor kitchen gear bowls, plates, utensils, trekking poles, carabineers, tarps, containers, etc. The reason is because I spent wildly on expensive gear long before I had sufficiently developed my preferences and skills. The mailman and I were on a first name basis for many of those years and my wife will happily recall many conversations where I defensively articulated that I had returned a box that had just appeared on our doorstep as not to worry her about my growing obsession. With this in mind, I try my best to give thoughtful responses when asked about what gear to purchase by those thinking about getting into lightweight backpacking. The answer is usually fairly straight-forward for novices "go to Walmart. It is with this in mind that I consider Outdoor Products. The Shasta Weather Defense Backpack is largely marketed as a day pack. It has a roll-top closure with haul loop, welded seams, articulated padded shoulder straps with sternum strap, a large front pocket and even a trekking pole holder. The padded back panel is fastened by Velcro and the waist strap can be removed. Dimensionally, the pack is So why should I care? Well, aside from being an excellent option for someone looking for an affordable pack, the Shasta Weather Defense Backpack offers far greater weather-protection and durability than other more expensive lighter weight backpacks. This versatility allows me to be less concerned about keeping the contents dry and also makes it my go-to pack for any activities associated with water. My sons and I spend a lot of time in our trusty canoe and having the Shasta Weather Defense Backpack as a resource gives me great peace of mind. The external pocket comes with a waterproof zipper and the pocket itself is larger than most top pockets and is easier to access. Other than use the pack while backpacking and canoeing, I felt the Shasta Weather Defense Backpack shined in two other situations. Do you lay it on the ground for it to get dirty and possibly infested with bugs or animals? Do you hang it from a tree and allow it to be exposed to the weather. Do you bring it into your sleeping area and allow it to take over your personal space? Do you hang it from your suspension, ridge line or bear bag and hope for the best? As the Shasta Weather Defense Backpack is built for durability, it has held up well for these exercises too. While most of this review seems pretty standard, I somewhat unexpectedly identified an additional value of this pack. Because the back panel and waist belt are removable, it allows the pack to sufficiently fit anyone in my family. As a father of two growing kids who will be educated on all things outdoors whether they want to or not, having the flexibility of this piece of gear in my gear closet is remarkable. So is the Shasta Weather Defense Backpack the perfect backpack? Most things in our society are designed for the average person. As such, my areas of concern likely may not be shared. First, the shoulder strap buckle hit me just above my armpit. This is because the shoulder straps are not long enough, at least for someone my size. Second, since I remove the waist belt for the pack to fit me, the fabric puckers at the lower part of the shoulder straps which connect to the pack and rubs on my sides and back. While this settled down the more I used the pack, I view this as a design issue which can be remedied by relocating the termination point of the shoulder straps. Bottom line, I felt the Shasta Weather Defense Backpack was affordable, durable, exceptionally versatile and great for family fun. Blending into the woods is GOOD! Course, red is a great dual-use signal color too. Either way, give the Shasta Weather Defense Backpack a look. This product was provided to me by the manufacturer free-of-charge for the purposes of this review; however the information contained herein is offered without bias.

## Chapter 3 : Jolly Green Giant | Chuck and Sarah Fanfiction

*Green Giant and Le Sueur are brands of frozen and canned vegetables owned by B&G Foods. The company's mascot is the Jolly Green Giant.*

## Chapter 4 : The Story of Green Giant's Sprout - AW
