Chapter 1 : Conduitt, John (DNB00) - Wikisource, the free online library

Observations upon the present state of our gold and silver coins, By the late John Conduitt, Esq ; Member for Southampton, and Master of his Majesty's Mint. From an original manuscript, formerly in the possession of the late Dr. Jonathan Swift.

Bullion coins are available in various weights and their precious metal content value will often exceed the face value of the coin. Mint produces two type of bullion coins: Uncirculated and Proof Coins. Uncirculated coins are coins that have yet to enter the commerce stream. All coins start out this way after they are minted, but some coins will remain uncirculated. To be an authentic uncirculated coin it must be certified. There also must be no signs of wear on the coin. If an uncirculated coin does show any signs of wear it may have physically contacted other coins at mint or when the coins were transported from the mint. Sell your gold and silver coins today! Call to get a quote. Proof coins are also uncirculated coins. They are rare and can often be expensive. In mint, proof coins are struck twice to bring out the full details of the coin design. The back of a proof coin is usually mirror-like. They are considered the finest quality of coin produced by the U. While a numismatic coin can be considered a bullion coin, investors who purchase numismatic coins often pay a pretty penny, as their value can be many times the value of the actual precious metal content. Numismatic coins are essentially rare or valuable coins that have external value. They can be more valuable because of their historical significance, they can be one of a kind, have special marks or be minted in an abnormal way, and therefore collectible items. Another coin not intended for general circulation. These coins are U. Mint products created to commemorate important aspects in American history, and help raise money to preserve history, such a build new museums, maintain national monuments, preserve historical sites and support various Olympic programs. These coins are sought after since there is a limited quantity and they are only available for a limited amount of time. The more popular the coin, the more likely it is that there are counterfeits and replicas of it. So how do you tell if your coin is real? Replica coins are usually reproductions of famous coins or historical events. You can often find them at souvenir shops, and marketing firms may distribute them as tchotchkes. An easy way to tell if your coin is a replica is by examining the seam that runs around the coin where the two halves of the casting mold come together: Unfortunately, replicas are virtually worthless, so before you make the investment, make sure you examine the piece carefully. Unlike replicas, counterfeits are put out into circulation to "trick" the public. Counterfeits are usually made of a worthless base metal, and can be easily detected if you know what to look for. Under close examination, counterfeit coins can have bubbles or pimples in the casting that can be seen under a magnifying glass. As coin collecting has gain more popularity, so have counterfeits. Forged gold coins are most commonly gold dollar and three-dollar gold pieces, or coins dated between You may also find ten-dollar gold pieces, as well as five dollar coins. For silver, the most common forged coins are the Lafayette dollars, some commemorative half dollars, and the half dimes. Alterations to coins are usually done to deceive collectors. The most common alterations are by changing mintmarks and dates. Overall, coins that are rare or high in value should always come with a guarantee of authenticity done by a professional, and should be one of the first things you ask for before purchasing a coin. Send your coin to Sell Your Gold today! We would be happy to examine and offer you a price. Click here to request a kit. These third-party grading companies provide a service for a fee, but are impartial and independent from the buyer and seller within a transaction. At Sell Your Gold we take all graded coins! Call us today at to discuss the details of the coins you are selling. The goal was to uphold and protect the integrity of the coin industry. The ANACS grader would examine a coin, determine its authenticity and give it a grade for each side of the coin. This is to ensure the graded certificate and the coin are never separated. These are now the top leading coin grading firms in the U. The Human Element Much like the diamond world, coins are graded by humans - not computers - which can often be subjective depending on the professional grader. Coins that are graded, can have a low quality and a high quality within the same grade level. Characteristics such as luster, color,

DOWNLOAD PDF OBSERVATIONS UPON THE PRESENT STATE OF OUR GOLD AND SILVER COINS, 1730

strength, and the strike of the coin can make one coin much more appealing than the other graded the same. Collectors look for this and like to cherry-pick by selecting the highest quality coin for a specific grade. Rising Standards Over the years grading has also become stricter. Collectors have nicknamed this "grade deflation". Click [here](#) to request your kit! An MS rated coin can have a poor strike, poor luster and discoloration. This is the lowest grade in uncirculated coins and actually tends to be an unusual grade. Uncirculated coins tend to grade from an MS to a MS which show moderate deficiencies with an above-average eye appeal. Modern bullion coins and commemorative coins are often found in the MS range. Few will be rated an MS, meaning a flawless coin. If you see coins that are marked with a "PR", that stands for Proof which is not actually a grade. Proof coins will also be graded, but include the PR with the actual grading i. Circulated coins also have grades ranging from Poor to About Uncirculated with a numeric grade from [Grading for Circulated Coins](#).

Chapter 2 : COTA oz. Gold Coin | Rosland Capital

This item: Observations upon the present state of our gold and silver coins, By the late John Conduitt, By the late John Conduitt, From an original manuscript, formerly in the possession of the late Dr. Jonathan Swift.

Not unlike David Morgan before we knew each other I accumulated metal and silver futures contracts, and rode prices into the March top. I sold my futures, but held the metal until the Hunt Brothers were knocked out of the game after the CRIMEX changed the rules to contract-offset only, collapsing the silver price. As the new bull market was getting underway in , I decided to write on a piece of paper the following sentence: Having worked with David Morgan at The Morgan Report for a decade, we were following the resource sector on a daily basis for subscribers and for our own accounts. I called it a day later in an email to Greg McCoach. You might be asking: First, I was definitely aware that we could be looking at a major cyclical top – though I never dreamed it would drag the metals down into a five year bear market. But that simply had not taken place. Here are the prices of four stocks I originally held, compared to where I finished buying them back 4 years later: This demonstrates why most people who want to control risk and limit the downside during serious declines should focus on holding physical metal. This correction convinced the majority of market opinion that the bull was over. However there was a young independent observer by the name of Richard Russell who noted that the market had not yet shown characteristics of a phase III. He therefore made a market call that one should buy the correction and hold on and wait for the phase III. His career took off from there. Richard Russell, first among equals Richard Russell went on to become the doyen of financial newsletter writers, publishing until his passing in November, Over ten years ago, David Morgan made a public comment about silver that I believe is as relevant today as when it was first expressed. He said, For the record, I will state, there will be another, more frenzied scramble that will carry silver prices to highs that will repair all the excess paper money creation, price suppression, supply deficit and bearish sentiment over the past two decades. This will become known as "The Great Silver Crisis. How to Make and Keep Big Money from the Coming Gold and Silver Shock-Wave was to make available to our readers, the very best thinking on this subject about why we felt the next few years would offer such asymmetric profit potential. With metals, the miners, or both – risking a reasonable amount – in order to have a shot at gains all out of proportion to the position size makes eminent sense. In it we offer a complete tutorial on how to structure your position so you can stay "in the game" as long as possible, yet still get out with a big profit chunk of your earnings. We have not yet witnessed the public mania phase of this bull run. And there is the Chindian Love Trade. Furthermore, we have an indebted global system that cannot pay back at anything close to its present value. We understand your frustration. At first blush, you may not you agree with us. But our message to you is this - when it comes to the upside potential for the metals and miners - take some time to consider the evidence and do the math.

Consider the true dynamics of this measure. First the bankers abolish the gold standard, to allow them to rapidly accelerate the speed at which they steal from us through currency-dilution. Indeed, it is Mr. Putting aside that separate issue, clearly the price of silver has been driven in recent decades mostly by its industrial demand. And it is this industrial demand which with a little help from the bankers kept the price of silver well below its true value for more than thirty years until early in this decade. How does industrial demand depress the price of silver? Ironically, it is due to how the brains of bankers functions. If a mining company went to a bank for a loan to build a new silver mine with the sales-pitch that silver was grossly undervalued, and they wanted to produce this valuable commodity in order to capitalize on this investment opportunity, the reaction of the banker is totally predictable. The banker would burst into laughter, and if he was polite would warn the mining executives not to let the door hit them on their way out. Conversely, if this same mining company approached the bank for a loan, and provided them with statistics on the amount of silver being consumed in various industrial applications old and new , the bankers would behave in a much different manner. Assuming that the mining company demonstrated that they could mine their silver at a cost below the current price, the banker would happily reach for his cheque-book. However, the bankers ensured that the silver market could never reach such an equilibrium by continuing to dump their waning stockpiles of silver onto the market. Thus, others will argue that industrial demand for silver could not directly stimulate silver mining, and therefore total silver production. In fact, while that argument has theoretical merit, in practical terms it is incorrect. Given that the price of silver has been highly correlated with most of those other metals, my analysis still holds true. Apart from the ingenuity of this business model, what is relevant is that Silver Wheaton goes to a bank for financing, to buy-up the production-stream of a particular mine " and Silver Wheaton obtains that financing based upon industrial demand fundamentals for only silver. Thus, even in a market which has been horribly distorted through manipulation, the principle which I articulated earlier is still applicable: It is simple economics that any good which is grossly under-priced will be grossly over-consumed. Faced with the abrupt end to their silver-manipulation which would make it much more difficult to continue to manipulate the gold market , the bankers fell back upon their oldest and most-favorite swindle: This is such an obvious sham that I simply lack the space to go until all of the clearly fraudulent implications of this fund, so I will restrict myself to just a couple of facets. Conversely, the units of SLV and all other bullion-ETFs represent privately-owned silver which has obviously been taken off the market. It can be one silver-for-sale or the other privately-owned but not both. At the end of , roughly two-thirds of official, global inventories of silver were nothing but an obvious paper-sham. While industrial demand for silver helped the banksters in their nefarious and illegal schemes for many years, it is now industrial demand which is certain to destroy the bullion-banks. What has become totally inevitable after 50 years of constant manipulation of the silver market is that this market is poised for the most spectacular default in the history of commodities markets " even more so than in the gold market. Companies which require silver to continue the existence of their businesses will be ready to bid-up the price of the commodity to multiples many times greater than an investor merely making a discretionary purchase. We can only assume that when a silver default occurs that it would bankrupt JP Morgan. He has a personal background in law and economics. Bullion Bulls Canada provides general macro-economic and political commentary, since the precious metals markets are among the most complex and misunderstood in the world. It also provides basic coverage of Canadian precious metals mining companies.

Chapter 4 : 'Observations upon the state of the Coins of Gold and Silver'. (Diplomatic Version)

*Observations upon the present state of our gold and silver coins, [John Conduitt] on racedaydvl.com *FREE* shipping on qualifying offers.*

This Customer Agreement this "Agreement" is made and entered into by and between Rosland Capital LLC, a Delaware limited liability company with a principal place of business located at Wilshire Blvd. The terms and conditions of this Agreement shall apply to all transactions between Customer and Rosland Capital. The amount due under the Purchase Order the "Purchase Price" shall be due and payable in full to Rosland Capital within ten 10 business days of the recorded Confirmation, in the case of a transaction involving proof, semi-numismatic, numismatic or premium coins, and on or before the date of the recorded Confirmation, in the case of a transaction involving bullion in either case, the "Payment Period". Notwithstanding the foregoing provisions of 1. The Purchase Price specified in a Purchase Order shall include, without limitation, all shipping, handling, storage, delivery, taxes, assessments and other fees imposed on transactions involving the Products. All amounts stated in a Purchase Order are in U. Customer shall be responsible for all shipping and handling charges incurred in connection with the delivery of the Products and Customer acknowledges that shipping and handling charges will vary depending on the weight, value, destination and method of shipment of the Products. Buy-Back Policy and Customer Service. If in the future you decide that you would like to sell any precious metal or coin products purchased from Rosland Capital, as a service to our customers, Rosland Capital will provide you the opportunity to sell such products back to us at the current market value determined by Rosland Capital for such products on the day the sale to us is completed. You are, of course, free to sell to others, but we believe that you may receive a higher net price by selling to Rosland Capital because we are familiar with the products we have sold you, and do not charge any additional fees or commissions when making such purchases. Due to market conditions and other factors, you may receive less than what you originally paid. Rosland Capital will make payment for any purchased Product within sixty 60 days of the date of receipt of the Products from Customer. Our buy-back policy is a voluntary service to our customers and is subject to withdrawal or change without notice. Rosland Capital maintains a dedicated customer service department that handles all customer services, including liquidation requests, refund requests and complaints. The classification of a particular Product depends on a number of objective and subjective factors and any classification may change over time. Bullion may be in bar or coin form, and its value primarily depends on its precious metal content. Numismatic coins including proof coins are coins whose value primarily depends on factors such as demand, scarcity, dates, condition and grades, and less so on precious metal content. Semi-numismatic coins are coins that have some bullion value and thus their value may fluctuate with the spot price of the precious metal they contain, as well as other factors such as supply and demand. Premium coins include numismatic and semi-numismatic coins, as well as proof coins and Exclusive Specialty coins of limited mintage, whose value derives from their quality and limited supply, as well as their precious metal content. Exclusive Specialty coins are typically of high quality, limited mintage, high precious metal content and often from a branded or other unique source; Rosland Capital determines which products are designated Exclusive Specialty coins based upon the foregoing factors. The difference between the Purchase Price Customer pays for Products under a Purchase Order and the price that Rosland Capital actually pays for the Products purchased by Customer under such Purchase Order is known as the "spread" and it is stated as a percentage of the Purchase Price paid by the Customer. Spreads charged to Customer under a particular transaction may differ significantly from spreads charged to other customers in similar transactions or spreads charged to Customer in other transactions. The foregoing spreads are approximations and the spreads at any time and for any given transaction may be significantly different. The prices quoted by Rosland Capital for the Products are established by Rosland Capital upon its analysis of each item and may change many times during the day. The prices quoted by Rosland Capital for the Products are not tied to prices quoted

DOWNLOAD PDF OBSERVATIONS UPON THE PRESENT STATE OF OUR GOLD AND SILVER COINS, 1730

by any other organization and there are no established daily limits on the amount those prices may change. Rosland Capital reserves the right to increase or decrease its prices at its sole discretion at any time. Tax consequences of transactions with Rosland Capital are the sole responsibility of Customer. Customer shall pay to Rosland Capital any sales, use or other tax applicable to transactions involving the Products. Customer agrees to execute such additional documents as may be necessary to perfect or evidence this security interest. Unless otherwise specifically agreed to by Rosland Capital in writing, Rosland Capital does not consent to the recording of telephone conversations with any Rosland Capital Representative by Customer or any third party. Customer acknowledges that Rosland Capital will not record all telephone conversations and that Rosland Capital does not guarantee that any recordings of any particular telephone conversation will be retained or are capable of being retrieved. What is suitable for one customer with a given financial means may not be suitable for other customers with the same financial means. Customer acknowledges that profit can only be made if prices for the Products rise in an amount over the Purchase Price paid by Customer for the Products and that Customer may still incur a loss despite favorable price movements. Customer acknowledges that Rosland Capital does not guarantee that its Products will achieve the same grades from any third party grading service in the future. Customer acknowledges that Rosland Capital Representatives cannot guarantee any market movement. Customer further acknowledges that Rosland Capital Representatives are not licensed as investment advisors and are not making any specific recommendations concerning any forms of investment. Rosland Capital and the Rosland Capital Representatives are not agents for Customer, have different financial interests and incentives from Customer and owe no fiduciary duty to Customer. Rosland Capital Representatives are commissioned salespersons whose commissions are greatest on numismatic, semi-numismatic and premium items and least on bullion. Rosland Capital does not provide investment or financial advice. Customer acknowledges that precious metals and coins do not earn interest or current income. Government, by Executive Order, prohibited the private ownership of certain quantities of gold bars and coins. Since the United States has not been on the gold standard. The Executive Order prohibiting private ownership was repealed in . Currently, there are no restrictions on gold ownership, and the ability of the U. Government to recall gold is limited to times of war and requires action by the President or Congress. No one can say with certainty if or how the U. Government might prohibit ownership of gold in the future, or whether any particular gold product might be exempt from any future prohibitions. Accordingly, they often choose to purchase precious metals that do not require disclosure of personal information such as name, address and social security number when they sell such precious metals. Currently, certain bullion, semi-numismatic and numismatic coins do not require disclosure of such personal information when a customer sells them. Customer further acknowledges that Rosland Capital is independent from and not affiliated with any of the companies which may provide those services. Rosland Capital may freely assign, transfer, or delegate this Agreement or any of its rights or obligations under this Agreement without notice to Customer. All communications given by Rosland Capital to Customer by mail shall be effective forty-eight 48 hours after deposit in the U. Upon proof of death, Rosland Capital will recognize the account as the sole property of the estate or lawful heirs, as substantiated in documents provided to Rosland Capital. Customer agrees to hold Rosland Capital harmless and defend against any loss, liability, cost or expense, including reasonable attorney fees, resulting from any action taken by Rosland Capital in reliance upon the foregoing. Rosland Capital may require such additional consents, documents or other papers in order to substantiate ownership of accounts and may retain account balances until it is reasonably satisfied of the ownership of such account and the persons authorized to take action with respect thereto. The formation of this Agreement constitutes the making of this contract within Los Angeles County, California, regardless of the manner, timing or location of delivery or receipt of acceptance of this Agreement. The parties agree that Los Angeles County, California is the exclusive venue for filing any action and hearing concerning disputes arising from or relating to the Products or this Agreement. This Agreement shall be governed by the laws of the State of California excluding conflict of law principles. If any provision of this Agreement is held by a court of competent jurisdiction to be void,

DOWNLOAD PDF OBSERVATIONS UPON THE PRESENT STATE OF OUR GOLD AND SILVER COINS, 1730

invalid, or unenforceable, then that provision will be enforced to the maximum extent permissible and the remaining terms and provisions of this Agreement will continue in full force and effect. No waiver or modification of any term of this Agreement will be effective unless in writing and signed by the party against whom such waiver or modification is sought to be enforced.

Email A new day is dawning for precious metals. The final outcome of this nexus is unpredictable, but it is foolhardy to ignore what is taking place. Central governments around the globe have waged, against their own citizens, a virtual "War on Cash. The War on Cash goes hand in hand with the imposition of onerous taxation levels, negative interest rates, and destruction of what little privacy we have left. Today "€" without a single one doing so "€" it might seem, as some naysayers have observed, that gold is at best a "barbarous relic;" at worst, just a "pet rock. The War on Cash has unleashed a hydra. From the invention less than a decade ago of the "cryptocurrency" Bitcoin, to its present-day evolution, a change of monumental significance is underway. The Foundation Is the Blockchain Satoshi Nakamoto is credited with the creation of Bitcoin and as part of its implementation, devised the first blockchain database. By definition, a blockchain "allows connected computers to talk to each other, rather than through a central server. Summary from an essay by Peter van Valkenburgh. This was 15 months before the debut of a process that now holds the potential to turn night into day for just about any kind of online commercial transaction Ethereum is a computing platform "€" and a cryptocurrency The Potential and the Promise Acceptance of gold and silver as a store of value and medium of exchange most likely pre-dates recorded history. Then someone the Chinese? In Venezuela, one ounce of gold buys a house. This worked swimmingly until they decided to print unlimited amounts of what David Morgan at The Morgan Report has so famously termed "paper promises. The original promise of value is accepted in good faith, but when that promise is broken through devaluation, faith evaporates, along with the value of the once-supported currency. For proof of this today, look no further than Venezuela. Digital Metal Data Points A number of firms work to merge cryptocurrencies with physical gold and silver. The weakness of purely digital money is that it is unbacked by anything tangible. It only works for people who have electricity and are connected to the Internet. As you read the following passage in italics from an interview with Beautyon, editor of bitcoin-think, conducted on lfb. There is nothing any government can do to stop it No amount of time can put the Bitcoin genie back in the bottle Bitcoin means the final death of government fiat money. It means the end of Big Government. It means an era of unprecedented prosperity, as savings once again become the source of investment. Will the Promise Be Honored? The keys to the argument are that when a person purchases digital metal, it must be stored in a secure location, in physical form of a stated purity, immediately available to its designated owner upon demand. It is not being loaned to others. The price is transparent, accurate, and available globally. Even though this is a nice image, remember that Bitcoin itself is intangible. But to the extent that investable physical gold and silver are removed from the control of exchanges and government coffers, and placed under "supervision" of the individual, the ability to manipulate the price and physical supply will deteriorate. This, I believe, is the potential that digital metal represents. It will operate on a decentralized, secure, transparent platform. The blockchain and the portal through which it flows could be Ethereum or a similar protocol. And if the "promise" is not honored? Then the concept of digital metal will be dispatched to irrelevance in the dustbin of history, as other experiments which have toyed with its essence have been. But pass or fail, no amount of digital tinkering will be able to stunt demand for gold and silver. Rather, the result will have simply been to introduce millions of new holders to the virtues of physical precious metals ownership. When investing in gold, buy Gold Buffalo coins or the more popular gold coin, check out Gold Eagle coins for sale. Last week, Stewart Thomson of Graceland Updates predicted the following: This is the beginning of the end for world gold price manipulation, and you can take that to the bank.

Chapter 6 : Money and Gold | World Gold Council

Volume I The Rise of the Gold Standard, 86 Excerpts from John Conduitt's treatise, 'Observations upon the present state of our Gold and silver coins'.

Any views expressed are his own and do not necessarily reflect the views of Peter Schiff or SchiffGold. As relevant and desired as gold and silver are today throughout most cultures, they have a much older and timeless context within the Bible. When examining scripture, a reader can draw three critical characteristics about gold and silver: Divine Origin The first reference to gold is during creation of the world in the second chapter of Genesis. The name of the first is Pishon: Gold is depicted as an asset of value. God designed them to be intrinsically valuable and beautiful, for gold does not tarnish nor corrode. It can be hammered so thin that a single ounce can spread over a sq. Silver is the best conductor of heat and electricity. It reflects light better than any other metal and when fully refined it looks like a mirror. Intrinsic Value These unique properties of gold and silver have served as benchmarks of value throughout scripture. One notable reference is a metaphor used by the Apostle Paul. Precious metals are not only unharmed when tried by fire but they become refined and pure. Monetary Quality In ancient times, it would be strange to refer to money as something outside of gold and silver. In the Bible, gold and silver are synonymous with money. In Hebrew, there was no word for money. Silver was used for day-to-day purchases, and gold was viewed as approximately twenty fold the value of silver. Gold and silver were used as money not only in Jewish culture but throughout all cultures. A believer could easily make the conclusion that God placed gold and silver strategically throughout the world. By doing this all nations throughout history have enjoyed the utility of gold and silver as money. In the last century, the world has removed gold and silver from its monetary role. By ignoring the use of gold and silver as money, central banks have created large economic imbalances. Every day currencies fluctuate in value, because of manipulative monetary policies. When central banks expand their balance sheets, artificial wealth is created. Monetary inflation and low interest rates enrich the wealthy, while the poor are robbed of their labor and savings. The Bible says God hates deceit and manipulation. God is the author of balance and justice. Precious metals act as a balance and a perfect unit of measure. When God created the world he set fixed quantities for each metal so we do not experience runaway inflation or deflation. In summary, God is the creator gold and silver, they are valuable, and they serve as money. This last viewpoint has been forgotten. The Gold Standard was abolished in and buying gold was unlawful in the United States from to Fortunately, we have the liberty to buy gold and silver and through liquidity providers such as SchiffGold and Goldmoney. These platforms empower individuals to create their own personal Gold Standard. Interested in learning how to buy gold and buy silver?
