Many times you can even use the same fingering! Make sure to read the comments in the score to help you further. Please note that there is no key signature used. This is to make it easier for beginners to quickly learn the scale pattern and fingering without worrying about learning the key signature. Practice the piano music scales in the exact order they are written, this helps you to get used to the fingering patterns! Whole-whole-half-whole-whole-whole-half This pattern of whole and half steps is what creates the sound of major. The Harmonic minor scale uses the same keys as the parallel major scale same starting note, but major , but lowers the 3rd and the 6th. The Melodic minor scale uses the same keys as the parallel major scale, but lowers the 3rd when ascending going up and lowers both the 7th, 6th and third going down. The Natural minor scale uses the same keys as the parallel major scale, but lowers the 3rd, 6th and 7th steps. Relative Major and Minor Each major scale has a relative minor scale. They are called "related", since they share the same key signature the sharps or flats in the beginning of the staff. Your free scales are for beginners- so I chose to write the accidental in front of each note, instead of using the key signature. So, for example G major and E minor both have one sharp sign as their key signature. When you practice the G major scale, you can use the same keys again but instead start and end on E. This is then called the Natural E-minor piano scale! Raising the 7th step gives you the Harmonic minor scale. Raising the 6th and 7th step going up, and keeping the scale Natural going down gives you the Melodic minor scale. Piano Music Scales Fingering Rules A simple rule when playing scales is not to use your 1st finger on a black key since it is too short. The fingering pattern you will see -much more clearly when playing many octaves- is the grouping of fingers in 1 2 3 and 1 2 3 4 patterns. Try to practice the piano music scales that share the same fingering first, and always hands separately. It is fun to play both- but more important to be able to confidently play one hand at a time without effort. Now go and do some "finger-jogging" with these piano scale exercises!
