

Chapter 1 : Essential Principles of Qabalah " Aurum Solis " Members Website

[PDF]Free Aurum Principle download Book Aurum racedaydvl.com Lola (song) - Wikipedia Thu, 08 Nov GMT "Lola" is a song written by Ray Davies and performed by English rock band the Kinks on their album Lola Versus Powerman.

The other is astrology. The beginnings of both extend back into the obscurity of prehistoric times. According to the earliest records extant, alchemy and astrology were considered as divinely revealed to man so that by their aid he might regain his lost estate. According to old legends preserved by the Rabbins, the angel at the gate of Eden instructed Adam in the mysteries of Qabalah and of alchemy, promising that when the human race had thoroughly mastered the secret wisdom concealed within these inspired arts, the curse of the forbidden fruit would be removed and man might again enter into the Garden of the Lord. As man took upon himself "coats of skins" physical bodies at the time of his fall, so these sacred sciences were brought by him into the lower worlds incarnated in dense vehicles, through which their spiritual transcendental natures could no longer manifest themselves. Therefore they were considered as being dead or lost. The earthly body of alchemy is chemistry, for chemists do not realize that half of The Book of Torah is forever concealed behind the veil of Isis see the Tarot , and that so long as they study only material elements they can at best discover but half of the mystery. Astrology has crystallized into astronomy, whose votaries ridicule the dreams of ancient seers and sages, deriding their symbols as meaningless products of superstition. Nevertheless, the intelligentsia of the modern world can never pass behind the veil which divides the seen from the unseen except in the way appointed--the Mysteries. These are the problems to the solution of which the ancients consecrated their temples of learning. Who shall say that they did not answer those questions? Who would recognize the answers if given? Is it possible that under the symbols of alchemy and astrology lies concealed a wisdom so abstruse that the mind of this race is not qualified to conceive its principles? It was practiced in Greece and Rome; was the master science of the Egyptians. According to the fragmentary writings of those early peoples, alchemy was to them no speculative art. They implicitly believed in the multiplication of metals; and in the face of their reiterations both the scholar and the materialist should be more kindly in their consideration of alchemical theorems. Evolutionists trace the unfoldment of the arts and sciences up through the growing intelligence of the prehistoric man, while others, of a transcendental point of view, like to consider them as being direct revelations from God. One is that alchemy was revealed to man by the mysterious Egyptian demigod Hermes Trismegistus. This sublime figure, looming through the mists of time and bearing in his hand the immortal Emerald, is credited by the Egyptians as being the author of all the arts and sciences. In honor of him all scientific knowledge was gathered under the general title of The Hermetic Arts. When the body of Hermes was interred in the Valley of Ebron or Hebron , the divine Emerald was buried with it. Many centuries afterward the Emerald was discovered--according to one version, by an Arabian initiate; according to another, by Alexander the Great, King of Macedon. By means of the power of this Emerald, upon which were the mysterious inscriptions of the Thrice Great Hermes--thirteen sentences in all--Alexander conquered all the then known world. Not having conquered himself, however, he ultimately failed. Regardless of his glory and power, the prophecies of the talking trees were fulfilled, and Alexander was cut down in the midst of his triumph. There are persistent rumors to the effect that Alexander was an initiate of high order who failed because of his inability to withstand the temptations of power. Kenealy, quoting from the Cosmodromium of Doctor Gobelina Persona, describes the incident of Alexander and the talking trees, into the presence of which the King of Macedon is said to have been brought while on his campaign in India: This mountain had two thousand and fifty steps all of purest sapphire, by which one could ascend to the summit, and near this Alexander encamped. And on a day, Alexander with his Twelve Princes, ascended by the aforementioned steps to the top of the Mountain, and found there a Palace marvellously beautiful, having Twelve Gates, and seventy windows of the purest gold, and it was called the Palace of the Sun, and there was in it a Temple all of gold, before whose gates were vine trees bearing bunches of carbuncles and pearls, and Alexander and his Princes having entered the Palace, found there a Man lying on a golden bedstead; he was very stately and beautiful in appearance, and his head and beard were white as snow. Then Alexander and his

princes bent the knee to the Sage who spake thus: The Tree of the Sun has leaves of red gold, the Tree of the Moon has leaves of silver, and they are very great, and Alexander, at the suggestion of the Sage questioned the Trees, asking if he should return in triumph to Macedon? And when he inquired, Who was he who should give him that poison? In all probability, the so-called talking trees were merely strips of wood with tables of letters upon them, by means of which oracles were evoked. At one time books written upon wood were called "talking trees. The Great Arcanum was the most prized of the secrets of the Atlantean priestcraft. When the land of Atlas sank, hierophants of the Fire Mystery brought the formula to Egypt, where it remained for centuries in the possession of the sages and philosophers. It gradually moved into Europe, where its secrets are still preserved intact. Redrawn from an original manuscript dated In his Key to Alchemy, Samuel Norton divides into fourteen parts the processes or states through which the alchemical substances pass from the time they are first placed in the test tube until ready as medicine for plants, minerals, or men: Solution, the act of passing from a gaseous or solid condition, into one of liquidity. Filtration, the mechanical separation of a liquid from the undissolved particles suspended in it. Evaporation, the changing or converting from a liquid or solid state into a vaporous state with the aid of heat. Distillation, an operation by which a volatile liquid may be separated from substances which it holds in solution. Separation, the operation of disuniting or decomposing substances. Rectification, the process of refining or purifying any substance by repeated distillation. Calcination, the conversion into a powder or calx by the action of heat; expulsion of the volatile substance from a matter. Commixtion, the blending of different ingredients into new compounds or mass. Purification through putrefaction , disintegration by spontaneous decomposition; decay by artificial means. Inhibition, the process of holding back or restraining. Fermentation, the conversion of organic substances into new compounds in the presence of a ferment. Fixation, the act or process of ceasing to be a fluid and becoming firm; state of being fixed. Multiplication, the act or process of multiplying or increasing in number, the state of being multiplied. Projection, the process of turning the base Metals into gold. Enoch, the first instructors in the alchemical art. Regardless of its originator, it was left to the Egyptian priests to preserve alchemy for the modern world. Egypt, because of the color of its earth, was called "the black empire" and is referred to in the Old Testament as "the land of darkness. During the Middle Ages, alchemy was not only a philosophy and a science but also a religion. Those who rebelled against the religious limitations of their day concealed their philosophic teachings under the allegory of gold-making. In this way they preserved their personal liberty and were ridiculed rather than persecuted. Alchemy is a threefold art, its mystery well symbolized by a triangle. Its symbol is 3 times three elements or processes in three worlds or spheres. The 3 times 3 is part of the mystery of the 33rd degree of Freemasonry, for 33 is 3 times 3, which is 9, the number of esoteric man and the number of emanations from the root of the Divine Tree. It is the number of worlds nourished by the four rivers that pour out of the Divine Mouth as the verbum fiat. Beneath the so-called symbolism of alchemy is concealed a magnificent concept, for this ridiculed and despised craft still preserves intact the triple key to the gates of eternal life. Realizing, therefore, that alchemy is a mystery in three worlds--the divine, the human, and the elemental--it can easily be appreciated why the sages and philosophers created and evolved an intricate allegory to conceal their wisdom. Alchemy is the science of multiplication and is based upon the natural phenomenon of growth. Alchemy is not the process of making something from nothing; it is the process of increasing and improving that which already exists. If a philosopher were to state that a living man could be made from a stone, the unenlightened would probably exclaim, "Impossible! A philosopher might declare that a universe could be made out of a man, but the foolish would regard this as an impossibility, not realizing that a man is a seed from which a universe may be brought forth. God is the "within" and the "without" of all things. The Supreme One manifests Himself through growth, which is an urge from within outward, a struggle for expression and manifestation. There is no greater miracle in the growing and multiplication of gold by the alchemist than in a tiny mustard seed producing a bush many thousands of times the size of the seed. If a mustard seed produces a hundred thousand times its own size and weight when planted in an entirely different substance the earth , why should not the seed of gold be multiplied a hundred thousand times by art when that seed is planted in its earth the base metals and nourished artificially by the secret process of alchemy? Alchemy teaches that God is in everything; that He is One

Universal Spirit, manifesting through an infinity of forms. God, therefore, is the spiritual seed planted in the dark earth the material universe. By arc it is possible so to grow and expand this seed that the entire universe of substance is tintured thereby and becomes like unto the seed--pure gold. In the spiritual nature of man this is termed regeneration; in the material body of the elements it is called transmutation. As it is in the spiritual and material universes, so it is in the intellectual world. Wisdom cannot be imparted to an idiot because the seed of wisdom is not within him, but wisdom may be imparted to an ignorant person, however ignorant he may be, because the seed of wisdom exists in him and can be developed by art and culture. Hence a philosopher is only an ignorant man within whose nature a projection has taken place. Through art the process of learning the whole mass of base metals the mental body of ignorance was transmuted into pure gold wisdom, for it was tintured with understanding. If, then, through faith and proximity to God the consciousness of man may be transmuted from base animal desires represented by the masses of the planetary metals into a pure, golden, and godly consciousness, illumined and redeemed, and the manifesting God within that one increased from a tiny spark to a great and glorious Being; if also the base metals of mental ignorance can, through proper endeavor and training, be transmuted into transcendent genius and wisdom, why is the process in two worlds or spheres of application not equally true in the third? If both the spiritual and mental elements of the universe can be multiplied in their expression, then by the law of analogy the material elements of the universe can also be multiplied, if the necessary process can be ascertained. That which is true in the superior is true in the inferior. If alchemy be a great spiritual fact, then it is also a great material fact. If it can take place in the universe, it can take place in man; if it can take place in man, it can take place in the plants and minerals. If one thing in the universe grows, then everything in the universe grows. If one thing can be multiplied, then all things can be multiplied, "for the superior agrees with the inferior and the inferior agrees with the superior. If any would grow metals, he must first learn the secrets of the metals: The metals grow throughout the ages, because life is imparted to them from the sun. They grow imperceptibly, in form like tiny shrubs, for everything grows in some way. Only the methods of growth differ, according to kind and magnitude. One of the great axioms is, "Within everything is the seed of everything," although by the simple processes of Nature it may remain latent for many centuries, or its growth may be exceedingly slow. Therefore, every grain of sand contains not only the seed of the precious metals as well as the seed of the priceless gems, but also the seeds of sun, moon, and stars. As within the nature of man is reflected the entire universe in miniature, so in each grain of sand, each drop of water, each tiny particle of cosmic dust, are concealed all the parts and elements of cosmos in the form of tiny seed germs so minute that even the most powerful microscope cannot detect them. Trillions of times smaller than the ion or electron, these seeds--unrecognizable and incomprehensible--await the time assigned them for growth and expression. Consider the monads of Leibnitz. There are two methods whereby growth may be accomplished. The first is by Nature, for Nature is an alchemist forever achieving the apparently impossible.

Chapter 2 : Aurum – A Passion for Consistency

Aurum Downloads (In Order of Complexity [most to least]) Digigraph Principles and Aurum Verses Side-By-Side: Core Digigraph Principles and Aurum Verses Side-By-Side.

Through the FEBBE event, whether the receiving side of remote end detects bit error or whether the problem lies in the channel between the sending of local end and the receiving of remote end can be identified. By observing these remote alarm events, we can identify whether the remote end detects bit error. For the bit error detection point and its correspondence with the remote bit error indication, refer to the alarm signal flow. Below table lists the overhead bytes of the bit errors. Termination Points of of Bit Error Performance The pass through and termination of different sections are different. Similarly, it is different for different type of paths i. DWDM system does not process the overhead bytes of multiplex section or below. These testing methods also indicate much about the link quality and the ability of the system to accommodate the link characteristics. The idea behind the BER Testing is very simple. In order to shorten the time required for measurements, a pseudorandom data sequence is used because as the error rates goes low, it takes longer for measurements if any degree of accuracy is to be achieved. To gain a reasonable level of confidence of the bit error rate it would be wise to send around times this amount of data. This would take about 22hours. It is clearly not convenient to have measurements taking this long. Accordingly to assist making measurements faster, mathematical techniques are applied and the data that is transmitted in the test is made as random as possible – a pseudorandom code is used that is generated within the bit error rate tester. This helps reduce the time required while still enabling reasonably accurate measurements to be made. BER Testing requires a bit generator or a test pattern generator, and a receiver, which is used to compare that pattern. The pattern generator sends a bit stream stimulus to the Device Under Test which then responds back with another bit stream. The receiver compares the actual response from the Device Under Test with the expected response which is provided by the user. Use the pseudo-random binary sequence PRBS to replace thee service. The service can be tested bit by bit. Generally, the SDH system realizes the online test with its abundant overhead bytes. The meter adopts the multiplex framing structure of different bit rates to test the overhead of path or device, parity check bit and alarm bit state, thus to test the transmission performance without interrupting services Summary BER Bit Error Rate Testing is a powerful tool for testing of Transmission Systems. Design Phase is the most important point in a project in which we have to take extreme care about BER.

Chapter 3 : TITAN - quadral

At Aurum we are dedicated to bringing authenticity, compassion and courage into leadership. The LBX program brings personal and leadership development together, teaching leaders to be human and humans to be leaders.

Performance – A proven investment philosophy achieving alpha-driven, uncorrelated, consistent returns over multiple market cycles. High Impact Social Programmes - We are committed to contributing to a better world and to supporting a range of social and environmental projects. We also encourage charitable engagement amongst all our employees. Culture and Stability - Continuity of people, process and philosophy ensures preservation of culture, cohesion, and stability at Aurum. Governance - Maintaining high ethical standards and integrity safeguards sound and reliable corporate governance. Risk - A strong culture of risk management. Aurum utilises proprietary systems to help facilitate thorough initial and ongoing due diligence, enabling us to manage portfolios whilst mitigating business risk. Aurum believes that environmental and social issues are important to any person or entity that breathes, eats, drinks water or utilises resources. There is a misperception that human beings, businesses and economic systems are separate from the environment and social issues. Incorporating these issues is vital to running any business. The underlying funds held by the Aurum portfolios invest in a wide range of asset classes, some for only very short time periods. In aggregate, the holdings of each Aurum portfolio are exposed to thousands of different stocks, currencies, government bonds, and commodities. The difficulty of assessing ESG compliance varies according to asset class - consider currency or volatility-focused strategies, for example. ESG issues are incorporated into the investment decision-making process when AFML considers prospective investments and when performing monitoring of existing investments. The core focus of this assessment is on corporate governance. AFML requires manager personnel and fund directors to have adequate skills and background knowledge. Amongst other things, internal processes, control measures, risk tools, incentive systems and policies on proxy voting and conflicts of interests are reviewed. Additionally, close relationships with managers facilitate a constructive dialogue around the topic of ESG. Generating long-term sustainable returns is dependent on environmental, social and economic factors and is at the core of our business philosophy. We understand that a business that is not in harmony with the ecosystem within which it functions is doomed to fail. Accordingly, Aurum embraces the notion of interconnectivity and recognises that being part of an ecosystem comes with a wider social and environmental responsibility. SRI, however, is in its infancy and we believe it will evolve and respond to these issues. We are actively monitoring this asset class and are looking to engage with providers to further broaden our understanding of their impact. In the meantime, if an asset manager or investor is unable to implement SRI, or if SRI is not in their mandate, they can still make a difference by choosing to invest philanthropically in regeneration, conservation and positive impact programmes. We believe that, for businesses operating today, this should be a normal expense. Businesses should give something back and try to regenerate the planet in some way. We believe the United Nations 17 Sustainable Development Goals are an important step in raising awareness and encouraging action to ensure a sustainable planet and future for those generations that will inherit it. We have, where possible, aligned our activity to meet these goals. The fund provides investors with an opportunity to both make investment returns and make a difference. The advisory fee generated from the fund supports a number of charities, principally Synchronicity Earth, a registered charity that supports the conservation of biodiversity, ecosystems and species at risk around the world.

Chapter 4 : Home :: Aurum Capital

Aurum Principle by J Michael Stephens starting at \$ Aurum Principle has 2 available editions to buy at Alibris.

No, because Securitas Aurum also has to conform to the general current market price of the gold and has to purchase according to that price. So, the only profit for Securitas Aurum is the administration fee in addition to the legal V. The Processing fees are charged for the following services: Well, principally this is possible and we also have customers who even have achieved that several times and so have proven that this is possible but principally we answer this question by a no. We expressively point out that because of the great number of customer recommendations to be given it is very difficult. So every customer has to consider to pay a part of the purchase amount or even the complete purchase amount by own financial means. In no way, Securitas Aurum pretends that every customer can fulfil his purchase contract completely by the marketing concept "Customers recruit customers". It also is clear that the longer Securitas Aurum is working successfully on the market the smaller the group of possible persons for recommendations will be. So never order more gold coins than you really need and are able to finance. Securitas Aurum is striving for consume without debts and does not want their customers to buy gold coins because of the motivation to pay the purchase price completely by acquiring new customers. As purchaser you must decide yourself for one certain kind of gold coins per contract. If a purchaser likes to have all the 6 of the most wanted gold coins all over the world for his gold collection or as a further guarantee of his retirement pension, 6 contracts are necessary. Thus, the management fees will be charged plus the legally applicable V. Of course, Securitas Aurum also has to follow these directives. That is why all gold coins ordered and delivered outside the UE countries are subject to the corresponding VAT and directives of these countries. The precious metal gold which is existing on earth in only limited quantity, is going to play a more and more important role in our life. Whether to safeguard the assets or the retirement pension. Securitas Aurum has undertaken the task to market gold not only to those persons who are able to purchase it immediately, but Securitas Aurum has created an accumulation plan by having constructed a very difficult infrastructure that gives everyone the possibility to purchase gold, by a mixture of paying a deposit and using the own working power. The principle is simple and successful at the same time: The customer is obliged to pay tax on his revenues from the accumulation concept of Securitas Aurum himself, and he has to act strictly according to the tax provisions and laws of the country where he has to pay his taxes. The principle of accumulation is easy to understand. The gold accumulation concept of Securitas Aurum includes an accumulation of your gold property by giving successful recommendations. The more customer recommendations you give, the more gold is accumulated on your account. Participation in the accumulation concept of Securitas Aurum always requires own activities. To gain new customers always costs money, independent from the manner an enterprise uses to do that. To advertise in the media also costs money, as well as to employ a sales force. As clearly stated under the Terms and Conditions and in the Shop of Securitas Aurum, the full Processing Fee of the value of the order is to be paid during the first calendar year. This also applies to the renewal of contracts. Securitas Aurum makes a personalized website available to the customer. The customer obliges not to modify that website. The customer is obliged to observe all provisions according to competition law. In case of direct marketing measures by mail, email or fax, the client must pay attention that there is an explicit agreement by the recipient. Furthermore, the customer is obliged to identify every measure of advertisement as a measure initiated by him. For the advertisement, the customer only may use material which was made available to him via the Customer Support System of Securitas Aurum. In particular, he only is allowed to use the name Securitas Aurum, the brand and the logo outside his personalized homepage if there is a written agreement by Securitas Aurum. During the term of a contract, Securitas Aurum transfers to the customer the simple, not exclusive, not transferable and at any time revocable right to use the brands and logos of Securitas Aurum for advertisement purposes. At the moment of finishing the customer relation, independent from the reason, at the same time the right of the customer to use the brand name expires. In case of a modification of the brands or logos of Securitas Aurum, the customer is obliged to stop immediately the utilization of the former brands and logos and to make an adaptation of the brand

utilization. The customer indemnifies Securitas Aurum from all claims by thirds arising because of the violation of obligations, notwithstanding further claims of Securitas Aurum. The accumulation plan offered by Securitas Aurum is only one of the alternatives to perform the contract. Of course, every customer also can fulfill his contract in the normal manner, by paying a deposit, paying the remaining debt within the payment period agreed or paying the complete purchase price immediately. In case of immediate payment of the contract or deposit and payment of the remaining balance within 12 months, we retain the complete administration fee plus V. The Fees will be proportionally deducted according to the credits accrued as a result of the recommendations achieved and charged from your CSS account. As clearly stated under the Terms and Conditions and in the Shop of Securitas Aurum, the full Processing Fee equivalent of the value of the order is to be paid during the first calendar year. The delivery costs are not included in this fee. No, for Securitas Aurum does not pay provisions or money. Gold Bullion Coins Altogether, direct or indirect orders need to be successfully recommended so that the purchase price of a contract can be fully paid through the accumulated recommendations. Throughout the entire accumulation process, 31 credits will be generated from phase 1, and 7 from phase 2 as well as the full credit for the balance of the purchase contract. Please note that the number of orders do not correspond to the number of new clients. Throughout the entire accumulation process, 7 credits will be generated from phase 1 as well as the full credit for the balance of the purchase contract. A renewal may be requested by the customer, for there are always unforeseeable moments which make a rearrangement necessary. Securitas Aurum treats his customers in a fair and responsible manner. A contract extension does not exempt you from paying the Processing Fees in full equivalent to a net figure of the purchase price per contract, and which is payable in each case within the first year of the duration of the corresponding contract. Securitas Aurum is not obliged to accept such a request. In addition, the deadline for the full payment of the processing fees is not automatically extended when a contract is renewed. Yes, there are time limits. A contract only can be changed in its position during the first 30 days after date of purchase or, when changing in another phase, during 3 days after the phase change. Principally, there only is a right to change the position of a contract if there is a positioning mistake made by Securitas Aurum. Furthermore, a change of positions exclusively may take place if: Important information for the application to change the position of a contract: Generally the repositioning is impossible if the sequence of recommendations is violated or if a person in the recommendation sequence is being excluded. By sending the order to change the position the sender expressly authorizes the enterprise to charge his personal CSS account with that amount. For all other customers, Securitas Aurum with pleasure undertakes the insured storage of the gold. Every customer also has the option to receive his gold order personally and directly at Securitas Aurum after previous agreement. Your contract partner is:

Chapter 5 : The Success Principles - Aurum Reviews

The 6 principles of Naturopathic medicine are the foundational part of what makes a Naturopathic doctor unique.

With this training you will: Use a very complete and gradual system of individual ritual practices; Use rituals coming from ancient Egypt, Greece, Rome, and the Italian Renaissance; Begin to really develop your psychic abilities; Learn and practice with a personal mentor trained by the Aurum Solis; Learn about the Hermetic, Ogdoadic, and Theurgic Traditions. Prepare your first initiation in the Aurum Solis How it is organized? The Pronaos is composed of two main aspects: You will use it during your practices in order to be truly in contact with the spiritual chain of the Ogdoadic Tradition and specifically the Aurum Solis. These groups are open to those who live near a House of the Order where they may participate with other members of the Order in group activities. Students who live far from a House can participate to online activities organised by an Internet House of the Order. The membership of a Pronaos Member has a duration of 12 months. If you have achieved the Curriculum of the Pronaos within one year, you will be able to apply for initiation in the First Hall in the Aurum Solis. What I will find in the Pronaos? You will find in the Pronaos a very well organized material. What about my inner abilities? Anyone has the capacity to develop and master his inner abilities. The latter can be purified by specific processes. Such inner work will give you health, strength, and a higher understanding of the world. As you may know, these invisible bodies are made of energy. If we do not control this inner power, it will remain useless or it could influence us in a wrong direction. Consequently it is important to understand the nature of this invisible plan. Then we should learn and be trained in order to master this inner power. These abilities are well known under some of their effects, such as: Intuition, Out-of-body experience, Telepathy, etc. However, these aspects are often consequences of a more deeper mastership: The revelation of your destiny that will be manifested in the best way possible! The first step you will discover in the Pronaos involves breathing, relaxation, mental representations, sacred pronunciations, prayers, etc. All these aspects are perfectly combined and activated in simple and very efficient rituals! What kind of teachings do you provide?

Chapter 6 : quadral AURUM 9

The Scientific Method and Principles of Science. Although labs may not be as integral a part of an environmental science course as with other sciences, it is still essential that students have a clear understanding of the scientific method and its importance.

Admittedly there is no stopping technical progress and so the sound of each more sophisticated successor is more mature, more harmonious and altogether more convincing. Simulation technology, CAD and an improved chassis make that possible. Wir verneigen uns vor Euch Jungs, Besser kann man nicht machen. Und, danke an alle audiovision leser! Hats off to you, boys. Nobody does it better. And, thanks to all all audiovision readers! The result of the XXL test of September 19, This impression manifests itself right after unpacking. Finest manufacturing quality, outstanding varnishes, a first class connecting terminal with sound potentiometers that fulfil the highest standard, and a top quality socle – this already shows the special status of Titan. Acoustically Titan 9 also satisfies the highest requirements confidently. Not only is the level stability exorbitantly high, even in the listening room above 40 square meters, no: Better attuned as its predecessor the current Titan 9 is also far from appearing aggressively or even shrill. Fine tuned midst, enormous transparency and brilliance in the treble range: Especially the high treble range shows the strength of Titan 9 impressively. Like this the tweeter appears perfectly attuned to Titan 9. In the bass range, on the other end of the frequency spectrum, the two powerful mm woofers set accents effectively. Due to the over the years perfected pressure chamber bass reflex principle a clear structured firm bass with extraordinary depths is provided. Like this Titan 9 presents itself as an in every detail totally successful new construction, that surpasses audibly the acoustic performance of its predecessor in all respects. The result was a highlight: The conclusion of Malte Ruhnke, chief editor of stereoplay: Does not know meaningful level or low bass limits, is after hours still relaxed, but demands an acoustically good spatial environment.

Chapter 7 : ESG | Aurum "A Passion for Consistency

Principal Note. Dear Parents, "To be invited to become the Principal of any good school is a privilege; to be invited to do so for a school such as Aurum-The Global School - where education and nurturing of children is going to be world class - is indeed both an opportunity and an honour.

The Scientific Method and Principles of Science Although labs may not be as integral a part of an environmental science course as with other sciences, it is still essential that students have a clear understanding of the scientific method and its importance. Nearly every aspect of environmental science has conflicting viewpoints. Many of these viewpoints have at least some basis in research and scientific principle, while others more closely resemble pseudoscience. An ability to use and recognize the scientific method will enable students to differentiate between true science and junk science later in the course. This is an outline of the major topics covered within this unit, their suggested sequence, a time estimate for each topic, and important objectives and vocabulary covered by this unit. Links are provided for any website, video clip, worksheet, or lecture Powerpoint needed by the instructor. This unit plan is primarily written for instructors of upper-level high school students and introductory college-level students. This Powerpoint provides the structure and ordering of the unit. Break up the lecture into sections by adding activities, discussions, labs, and videos. This will allow the material within the unit to be taught in small, manageable amounts, while giving students the opportunity to apply the knowledge in a variety of different ways. Scientific method, pseudoscience, hypothesis, theory, observation, experimental group, control group, independent variable, dependent variable, prediction, natural experiment, modeled experiment, blind experiment, double-blind experiment, probability, sample size, matter, law of conservation of matter, energy, laws of thermodynamics, atomic structure, protons, neutrons, electrons, atom, molecule, compound, pH scale, acids, bases. Taking efficient notes can be a big challenge for many students, especially when working from a Powerpoint lecture. This outline gives students a means to take notes that guides them toward important concepts and avoids the pitfalls of writing word-for-word or simply not taking notes at all. The outline is written as a series of questions, fill-in-the-blanks, or diagrams. The scientific method is a concept that is taught in every science class. However, students often do not seem to fully grasp its importance as a tool in experimental design. This worksheet shows them three famous experiments, the results of which continue to affect us even today. Beriberi in chickens, the discovery of Penicillin, and the debunking of spontaneous generation. The first two experiments students will analyze and identify the different parts of the scientific method and experimental design. The last experiment students will use as a basis to create their own procedure Essential Concepts: Scientific method, pseudoscience, hypothesis, theory, observation, experimental group, control group, independent variable, dependent variable, prediction Mythbusters Clip: This one in particular is effective, as the actual raw quantitative data collected in the experiment is shown. Students can perform an analysis of their own and assess the validity of the conclusions of this segment. Scientific method, experimental design, quantitative data, graphing, independent variable, dependent variable, sample size, natural experiments, modeled experiments. The Eyes of Nye: Pseudoscience View Worksheet Purpose: This episode of the "Eyes of Nye" gives students a brief tour of some of the most famous examples of modern pseudoscience. Bill Nye applies the scientific method to "extraordinary claims" such as astrology, fortune-telling, palm-reading, tarot cards, firewalking, and others. Pseudoscience, scientific method, bias, experimental design, astrology, zodiac, fire walking, tarot cards, psychics, cold reading. This assignment will present students with three articles about vaccines: Students will be guided through an analysis of the articles, including identifying clickbait, researching the background of the authors, and judging the validity of several statements within the articles. Pseudoscience, fake news, news analysis, sources. Do Dowsing Rods Actually Work? The best way to learn the scientific method is to actually apply it in a hands-on way. This lab allows students to test an unusual claim -- that copper dowsing rods can be used to locate water, missing objects, or deposits or metal underground. Most scientists identify dowsing rods as another example of pseudoscience, and this lab helps guide students in constructing a blinded experiment where they test the claimed properties of dowsing rods

themselves. Scientific method, observation, experiment, independent variable, dependent variable, hypothesis, conclusion, data analysis, bias, pseudoscience. Astrology is a great modern example of pseudoscience. Interpreting the movements of the planets and relative positions of stars and constellations seems scientific on the surface, but a deeper look exposes a complete lack of any scientific methodology at all. This is a multipart activity that will help students explore what astrology is all about and question its tenants. Pseudoscience, scientific method, bias, experimental design, astrology, zodiac. This journal writing assignment has students to examine a popular doomsday scenario that has persisted throughout the internet over the last several years. The idea of Planet X is liked to a woman who claims to have been contacted by aliens in an attempt to warn the human race of its impending destruction due to planetary collision. Students will examine the arguments behind this scenario, including any photographic evidence offered by the ZetaTalk website and form their own conclusions as to the validity of this idea. Pseudoscience, scientific method, bias, experimental design, Nibiru, , Planet X. Secrets of the Psychics Purpose: This documentary explores multiple supernatural claims made by psychics, psychic healers, faith healers, and others. Students will see that when the scientific method is applied to each of these claims, they fall apart rather quickly. Pseudoscience, scientific method, experimental design, independent variable, dependent variable, double-blind experiment Scientific Method and Principles Study Guide View Worksheet Purpose: Once the instruction for the unit is completed, students can complete this study guide to aid in their preparation for a written test. The study guide is divided into two sections: The vocabulary is taken directly form the lecture, sequentially. The short answer questions are meant to model the type they may see on the exam.

Chapter 8 : Aurum Verses | racedaydvl.com

In effect, this principle is a combination of deep and kick-bass. Two attributes which only a few loudspeakers combine. New with the AURUM 9 is the bass reflex port which is placed in the front, between the woofers.

Gold has always been the preferred metal for sacred objects and to embody the divine right and dignity of sanctified kings. Gold, and that which is golden, implies the quality of superiority. To the Christians, it was a fitting gift, with frankincense and myrrh, to lay before the Divine Child. To the alchemists, gold was the metal of the sun, monarch of the realm of metals, unsurpassed in excellence, perfection and eminence. In their laboratories they strove to hasten this natural transmutation. Though they failed, their efforts gave remarkable impetus to the development of science. Though their conclusions were in error, Aurum, when called for, is one of the greatest remedies in the materia medica for resolving ego-based obstacles to spiritual unfolding; it works the alchemy of excellence. Civilisations and nations have been destroyed for gold. Here we witness its extreme and dreadful duality. A noble, lustrous, warm and magnificent metal, the very symbol of nobility of spirit, purity of heart and lofty ideals, debased to become the object of rapacious greed and arrogant pride. Symbolically and dynamically, gold possesses a disturbing ambivalence. Gold, although on the earth, is not of the earth. Gold possesses a peerless brilliance, but also a profound darkness. Like humanity, whose spiritual-mortal state it parallels, gold carries its contradictions and contrasts within itself. Despite its ponderous mass, it is the most ductile and malleable of all substances on earth. As a remedy, it has the capacity to penetrate into the deepest recesses of the unconscious to release and resolve old emotions, oft repressed out of memory. Aurum can heal the wounded child within the adult. It is for the idealist whose fantasies and romantic notions soar beyond the reasonable: In many traditions, gold was identified as the very substance of divinity: He was the enemy of barbarism and the champion of temperance. His characteristics and nature reflect important facets of the Aurum archetype and ego-personality. He was a favoured son of Zeus, the Sky God, a crown prince in a patriarchal hierarchy governed by logic and reason. This left-cerebral bias is expressed through right-somatic responses and when dysfunctional produces symptoms predominantly on the right side of the body. The oracle exerted a pivotal influence on the life of all Hellas, and became its spiritual heart. Communities as well as individuals consulted it for guidance. It was believed that at Delphi the dark and disorderly aspects of the cosmos had been defeated by, and subordinated to, Apollo, the celestial seer, counsellor and law-giver, whose mediating power, expressed through the Pythia, could give mortals divine guidance for coping with the vicissitudes and dangers of life. Delphi was thus regarded as the centre, heart, navel or womb of the world Delphi or Delphos signifies womb. The heart and the uterus, both hollow, muscular organs, are metaphorically and by reflex related and Aurum has a marked affinity for both. The image of the sun in the earth is gold; the image of the sun in the body is the heart, for just as the sun radiates life-giving energy to the solar system, so the heart circulates blood, oxygen, warmth, nutrients and life to the body. The sun and gold of the conscious mind is the will, which radiates confidence, hope, courage, power, motivation, drive and ambition to the emotional being. The sun and gold of the soul is the conscience, the voice of the higher self, radiating virtue, silent knowledge and spiritual aspiration to the lower-self. He experiences loss of will, loss of heart, loss of power and loss of conscience. The focus of life becomes materialistic and egocentric, and disease of the heart or uterus may result. When the sun, heart and will of Aurum set, hope, joy and optimism are gone and only desire for death remains. Dionysos The ambivalence of Aurum is revealed in the mythological dynamics of the Delphic oracle. The risen god also had his sanctuary at Delphi. During the three mid-winter months of the year, Apollo always departed for the blessed and mysterious land of the Hyperboreans the land beyond the north wind. In his absence Dionysos enjoyed sole rule and worship at Delphi. He was the antithesis of Apollo, being the God of Ecstasy and Rapture. He is the feminine and shadow side of Apollo and he is the feminine and shadow side of Aurum, most often repressed, hidden and unrealised, because above all Dionysos is the masked god. Aurum in its deepest and most morbid depression, more than any other remedy, wears a mask of normalcy, belying the inner anguish. Aurum, like Dionysos, needs to bring his darkness, his shadow-self and his femininity into the light. Archetypal conflict

This sharing of the most sacred shrine of the ancient world, by two gods, is critical to the understanding of the archetypes they symbolise and to an understanding of Aurum. An intense and extreme polarity exists between these two divinities: Often the sacred and the profane are joined in moral contention. A similar primordial struggle is found in other remedy archetypes – Lachesis, Ana cardium, Thuja and Liliun tigrinum. However, our modern society encourages the archer aspect at the expense of the creative nature and this emphasis, imposed on a golden being, is responsible for much of the emotional and psychological difficulties of the archetype and the pain and heartache of those who love them. These are all prime Aurum characteristics. He lives too much in his head and too little in his heart; too much in his thoughts and too little in his feelings. However, music has special significance for Aurum. They have a deep love and need for it, especially classical and sacred music, which can even relieve their pain and suffering. The combined traits of relief from music, deep religiousness and exacting perfectionism are strongly indicative of Aurum. Unrequited love Despite his manly beauty, Apollo was singularly unsuccessful in love and often rebuffed. She therefore fled his advances in terror. As he was about to overpower her and claim her for his own, she cried out to her father, the river god, to spare her. She was instantly transformed into a laurel tree. Being associated with the god, the laurel, like gold, became the symbol of victory and triumph – a symbol which often graces the brow of a splendid Aurum. Hatred and revenge Aurum is an important remedy for unsuccessful love, rejection, betrayed friendship and loss of a loved one or beloved pet. The Sublime One When the finest, translucent leaf-gold is held up to the light a most magnificent, shimmering green colour is revealed. It is the colour of the fourth, the love chakra, a whirling vortex of dynamic energy situated in the heart region. The alchemy of life gradually and inexorably separates the spirit-gold from the ego-dross and the golden being transcends the personal flux of ambivalence and conflict. The innocence of a child and the enlightenment of a seer are united in gold. Gold in its highest form no longer seeks, it has found; it no longer believes, it knows. Gold asks that we trust and dare, for only when we trust can we surrender, and only when we surrender can we fully receive – even that which lies beyond the north wind!

Chapter 9 : Aurum metallicum () - British Homeopathic Association

Aurum Reviews. I'm a life coach and entrepreneur who is grinding like everyone else. I'm not Mark Cuban, sitting up on high, having made it and passing down wisdom.

In order to optimize our website continuously for you, we use cookies. You may deny the usage of cookies. For details, please refer to our Privacy Policy. Every generation combines consistency and innovation in a unique way. It is the love for detail, the meticulousness that is put into the development and manufacturing of AURUM products, which makes these loudspeakers so unrivalled. Nothing is left to chance; everything is merged to a harmonic unity. Inside are massive braces and insulated walls. Wedge-shaped midrange chambers also provide a clear reduction of unwanted standing waves in this big floor-stander. Even the bevelled housing edges improve the omni directional sound characteristics. Besides the tonal aspects, this latest design plays a distinctive role in our future development. Loudspeakers are furniture that have to fit harmoniously into their environment. AURUM 9 clearly demonstrates a language of reducing form. Exquisite high gloss lacquer finishes in custom colors and oiled real wood are available. Polished chrome helps further accentuate a specific level of luxury. Slenderness and subtlety is achieved by tapered lines and carefully considered contouring. Optionally, the fronts can be covered with neutral fabric covers which are meticulously framed and supported thanks to the metal frame. In comparison to conventional ribbon tweeters, quadral quSENSE is the product of a short and wide ribbon. Therefore the membrane surface is highly resilient. The result is impressive: In addition comes an unrivalled, finely drawn and hugely detailed sound picture of enormous clarity. As a result, a most harmonic acoustic center emerges providing the ultimate listening pleasure. Manufactured in Hannover Manual stamping of the ribbon Mounting of the massive aluminum front panel Measurement of finished installed units
