Get the latest news and videos for this game daily, no spam, no fuss. Collapse What is a game? Why do games exist? How should you approach them? How should you perceive and engage with the games you play? While doing so, he shares personal anecdotes regarding his relationship to the games and their creator. Beginning with a small desert-themed Counter-Strike map and continuing through to large oppressive labyrinths, you see the results of Coda learning how to build new environments, develop new mechanics, and create new art. The story moves at a brisk, but thoughtful pace. Wreden is that friend watching you play a game he loves over your shoulder, waiting for your reactions, sharing your enjoyment. Or should a game speak for itself, leaving you to form your own interpretation? Wreden seems to believe that games can be a window into the mind of their creator and that by exploring their work, you can find meaning, develop insight into their personality, and form a connection with them. He has a few neat tricks, too. Impossible puzzles and impassable terrain are negated, allowing you to move through spaces not intended for exploration, and find things that exist there. But the result of these discoveries raise more questions about Coda as both a human being and creator, as well as game development in general. Does it matter whether a player can complete a game? Does the matter if a player understands it? At most, you move through a space, engage with dialogue trees, and perform very light puzzle solving. After humble beginnings, Coda eventually learns how to create huge, oppressive labyrinths. The conclusion to the narrative involving Wreden and Coda is both moving and thought provoking. Whether the story of Coda is fictional or not, is irrelevant. It succeeds in helping you understand and sympathize with game developers as artists and people. It equips you with important tools to perceive and think about both video games and other mediums in intelligent ways.
