

Chapter 1 : The Curved Planks by Yves Bonnefoy (, Hardcover) | eBay

This bilingual edition of The Curved Planks sets the French texts alongside English versions by the noted translator Hoyt Rogers, who has collaborated closely with Bonnefoy in crafting poems that re-create the freshness and vision of the originals.

Translated by Anthony Rudolf. Etchings by Paula Rego. Behind him the moonlight was reflected on the river. Hearing a faint noise, the child who was approaching in complete silence, understood that the boat was stirring, brushing against the dock or a stone. He was clutching a small copper coin tightly in his hand. But the ferryman, who seemed distracted, had already noticed him, through the reeds. But you know very well what you hear when someone calls you or hails you. Where do you live? Click an image for an enlargement. His voice came from less far away in the darkness. But at first he had chuckled a bit. With a sudden movement the boy clung on to the ferryman, and sighed. The ferryman was now able to grasp the pole with both hands. He steered the boat out of the mud, and it quit the shore, while the sound of the water grew stronger in the shadows, beneath the glimmers. A moment later a finger touched his ear. I never move far from the two riverbanks. All the same, the boat does not founder, rather it seems to vanish into the darkness, and the man is swimming now, with the little boy still holding fast to his neck. Images courtesy the artist and Marlborough Fine Arts London. The hubbub grows louder, the shadows are already lengthening on the water, the first boats appear " and then, all of a sudden, the other world is there, our eyes have closed, we are sleeping, the most tangled and elusive part of our nocturnal dream possesses everything. Paula, you put speech to the test of night. The frail voice which sought the clearest and simplest truth in the relationship between people, you bury it, as a mountain crumbles, under the multiplying voices that you hear crashing around inside you, as they protest violently, crazily, angrily, in the abyss of the unconscious. Your dark revelations have become the entire sky, the entire earth. What will remain of the hope of this child who has arrived from nowhere, clutching in his clenched fist what he needs to pay for his passage? Everything, in my opinion. Against the mass of your whirling protean visions, the image of a young woman " rowing hard beneath a wild sky on a swollen sea " stands out quite clearly. And there is anguish on her face, and two or three children are holding on by their fingertips to the edge of her small boat, they are lost, they are going to die " but what is this boat? This particular etching and at least two others reveal that it is the boat which all children everywhere love to create out of nothing by folding, refolding and folding yet again a piece of paper, which they then, occasionally, throw on the water, but in that case it only lasts a moment, the paper is not made for water, the ship is waterlogged, it sinks. And so, how can this paper boat that you yourself have drawn not sink beneath all that weight, beneath the immensity of your imaginative power? How is it possible not to think that you have no hope? For who would risk everything, like this terrified young woman, amidst the hostile waters, and head for the unknown, if he had not locked within himself an indestructible hope? In truth, what emerges from this metaphorical etching, and from many others, is hope, in its purest form. Paula, I believe that you have perceived in that little figure of mine who suddenly appears on the shore the desire to give meaning to life; and you have imbued this desire with all the sadness and all the griefs of life already lived, but you do not deny this desire, you do not scorn this expectation. You love in them that moment when despite all appearances " all those obscure dramas, all those sorrows which your work evokes " we want to believe in another shore. There was a vase on the table, with red flowers. You took the boat, with one petal you loaded it up, and pushed it away, this time into a vast open space. No, that red shape was, perhaps, a sail. What is the father for us, orphans of meaning? It is this sombre mass standing in the rushes. Between her way of looking at life and mine there is such a difference that I ought to believe in our incompatibility. Every time I look at one of her pictures, even the most violent ones, I feel, beyond my admiration of the power of the composition or the vigour of the draughtsmanship, a strange attraction, as if what Paula Rego knows how to express opens up in me a region of my being which for some reason I usually forbid myself to visit. Already, the text sought to express my astonishment at that sense of closeness, of complicity. And, to be sure, my admiration, my affection. Yves Bonnefoy had long wanted to write something which Paula would accompany with a visual

work. However, in the end, he offered the prose fable at the centre of his book *Les planches courbes*: The whole of *Les planches courbes* has been translated into English by Hoyt Rogers. Bonnefoy immediately wrote the above meditation in the form of a letter. So, in conventional terms, it is unpublished. My translation of the fable itself was also published in *Poetry Review*

Philip Roe Yes this is one approach but the OP as on how to do it without removing any material? Trying not to remove any material at all is setting yourself up to fail. The OP starts with 2". But if the boards are bowed as well, I dont think any method could be relied on. Wet towels and an iron. With this method, the warped wood is exposed to heat while covered with moist towels or blankets. The towels should be damp but not soaked. The wood should be well covered and placed on a rigid iron bench. Press a steam iron down onto the end of the wood piece moving systematically to the other end. Repeat the process while observing the results. This method is effective for wood that has mild to moderate warping. The warped wood should be well-covered with a wet towel or blanket. The wood should be placed on a straight rigid surface or bench with the inward curve facing downward. At this point, the wood is put in the sunlight and water is sprinkled on the wrapped towel for good measure. This process may take several days to have an effect. At night, the wood should be stored in a warm environment. Pressure For this method, pressure is applied to the wood on the curved area, and care is taken to avoid damage. The warped wood should be covered with a wet paper towel on the concave side. Clamp the wood tightly and leave it for about a week while observing the results closely. If the bend is still there, increase the pressure on the curved area. These are not complete instructions, but rather general summaries of the processes, which are readily found online. For more details, I recommend checking out the guide on Carve Your Creation. In this case, as others have said, steam bending would likely be the best option.

Curved Flooring from Pure Timber LLC is custom made for each application. The planks can flow and curve around obstacles like kitchen islands as if they were islands in a river. The planks can flow and curve around obstacles like

kitchen islands as if they were islands in a river.

Chapter 8 : The Curved Planks by Yves Bonnefoy

The ferryman has trouble moving forward; the water reaches the sides of the small boat, and then pours in, its currents filling the hull as they reach the top of the giant's legs, which are conscious that support from the curved planks is fading fast.

Chapter 9 : Curved plank of a ship. crossword clue

Planck's law (colored curves) accurately described black body radiation and resolved the ultraviolet catastrophe (black curve). Planck's law describes the spectral density of electromagnetic radiation emitted by a black body in thermal equilibrium at a given temperature T .
