

Chapter 1 : Child Porn Virus: Threat or Bad Defense? - CBS News

Based on the widespread availability of pornography today, one might conclude that we as a society are increasingly accepting its presence as normal.

Just how real is this threat? And how can you keep it from happening to you? But the innocent have little to fear, according to experts. The AP story reported about the case of Michael Fiola, a former Massachusetts state employee whose state-owned work computer was found to contain illegal child pornography images. He was fired and charged with possession of child pornography which, had he been convicted, could have landed him in prison for up to five years, according to the AP. Sexually explicit images of children - who are often being exploited - are not protected by the First Amendment because they may memorialize, celebrate, or encourage sexual crimes against children deemed defenseless victims. Although Fiola avoided a child porn conviction, he reportedly has suffered related indignities, including death threats and friend abandonment. Could it happen to you? To help answer these questions, I spoke with security experts, legal scholars, former prosecutors, and Justice Department officials. And forensics experts can detect intention. He pointed out that the zombie machine storing the data would have to be turned on and connected for the malware sender to access it. Although there are ways to evade detection, forensic investigators do have ways to trace Internet Protocol addresses to catch people in the act of uploading and downloading material. He has, however, seen cases where "someone was redirected to a site where it could have entered the cache. Totality of evidence "A good forensics expert would try to determine how the images got on the computer and who was responsible for putting them there," he said. Was he using the computer to send e-mail or visit other Web sites at the time? Another indicator is the time lapse between image downloads. A virus or Trojan horse is likely to download multiple images at a time, sometimes faster than might be humanly possible to do manually. A person who collects child pornography typically acquires it over a period of time, and a forensic investigation of the computer should reveal that. Phil Malone, a clinical professor at Harvard Law School and director of its Berkman Center Cyberlaw Clinic, agrees that a good forensic investigator should be able to tell the difference between files placed by a virus and ones deliberately downloaded. You can actually figure this out. In the handful of cases that have been problematic, it looks as if everyone moved too quickly. The agency discovered material and immediately jumped to conclusions. If there were none of those searches and nothing else but some images in the cache, you would question how they got there. You would look for collaborating evidence such as intent to visit the site and capability of visiting the site. Did he have knowledge? Burden of proof "In each case, the prosecution will need to prove that the defendant knowingly and intentionally possessed, received, or distributed child pornography," according to Drew Oosterbaan, chief of the Child Exploitation and Obscenity section of the Justice Department. We prove the latter in myriad ways. A former federal prosecutor now working for a technology company, who requested anonymity, said this may become a bigger issue as we enter the era of cloud computing, in which more and more data is stored on Internet servers instead of hard drives. Subscriptions to paid programs should be renewed. This article originally appeared on CBSNews.

Chapter 2 : Unplugging Pornography: Helping Your Teen Escape the Trap - Christian Parenting

Some teens and youth are becoming so entrenched in pornography, they need a radical break from it. On today's program we interview therapist Matt Bulkley, the Executive Director of STAR Guides, as wilderness therapy program for youth struggling with porn addiction.

Arllen Ade tells people when they ask him why he should talk to them about pornography. Founder of the group Unplug at Liberty, a group designed to help men who are struggling with sexual sin and pornography addiction, Ade knows that all circumstances, whether good or bad, can be used to bring God glory. The first session of Unplug took place Tuesday, Feb. According to Ade, there will be a selection process prior to the start of the group in order to choose the men who are really struggling with pornography. Ade became excited when his high school friend told him all about the Internet. But when Ade went to college, he was obligated to go to cyber cafes where there was Internet access in order to get his papers typed. After college, Ade traveled to the United States, where he was invited by a church in the D. During this time, Ade lived with family members who had Internet access. It felt like I could not stop visiting and revisiting those sites despite the guilt and shame it brought me. After a while, Ade realized he needed help. He read about what it means to be free in Christ and after much prayer, he was set free from his addiction. That was more than 10 years ago. Now, Ade feels that the Lord has called him to help others who are struggling with the same problem. According to Ade, he and others have been developing Unplug for two semesters. Ade and his colleagues worked with professional counselors, therapists and ordained pastors to build a strong team of leaders for this group. The first is recreational viewers, second is at-risk viewers and the third is compulsive viewers. Recreational viewers are those who look at pornography every once in a while and find that it relaxes them. At-risk viewers are those who find themselves turning to pornography more frequently. Compulsive viewers are those who know they need help and are seeking it from Christian counseling. In the future, Ade would like to create another project where women can participate in a group similar to Unplug. For more information on Unplug and how to get involved, contact Ade by emailing abade@liberty.

Chapter 3 : Unplugging the addiction - The Liberty Champion

In this episode, Jeffrey answers questions about purpose, self-harm, pornography, family vacations, kids getting older, prayer and more. Check out this episode! [Read More](#).

Kids are running around the house. And we are solidly middle-aged. We do a lot of things to stay young. Rub in the moisturizer. Anything to look and act young again. Thanks to the folks at Common Sense Media, we now know of one youthful behavior pattern that we mini-van driving parents have in common with our smartphone-addicted teenagers: But for those parents who are hoping to curb some of the over-the-top media usage they observe in their children, it might be best to start with your own technology habits. Below are three things parents should consider. Most of us knew our kids were using a lot of technology, but we were surprised it was that much. We began discussing ways to curb their usage, encourage more healthy behavior, and ensure their safety while in the virtual world. But how many of us examined our own technology habits? It turns out, Common Sense Media did just that. Guess what mom and dad? Caught your breath yet? Well, take comfort in the fact that, though we appear to be hypocrites, we are blissfully unaware of it. Perhaps the first step in bringing technological harmony to our homes is to set boundaries for ourselves. Take comfort in the fact that you are not alone. Many of us are worried about the activities of our children in the digital universe. Others are afraid that if they get too involved, their children will get upset. We have to be their parents in the digital world too. It is just as influential and just as potentially dangerous. In the Common Sense Media survey, parents indicated their concerns over some very common online activities. Regarding online activities, the top four concerns were: Do not be afraid to be their parent. Set boundaries around usage. Limit usage during certain activities such as dinner time, homework time, and while driving. Set up controls to block access to dangerous content such as pornography, violent images, and hateful social media posts. Most parents have reported having a range of media rules for their tweens and teens. As parents, our job is to teach our children good habits that they will need to thrive in the modern world. Teaching good, balanced technology habits is as important as teaching our kids good eating habits. We must keep our children safe, but we must also let them explore and learn in the modern world. We can embrace the positive benefits of technology and the good it brings while acting to keep them safe. And all of that needs to begin with us: The Common Sense Census:

Chapter 4 : Does Pornography Lead to Sexual Assault? - The Good Men Project

Founder of the group Unplug at Liberty, a group designed to help men who are struggling with sexual sin and pornography addiction, Ade knows that all circumstances, whether good or bad, can be.

Chapter 5 : Wilderness Therapy for Boys with Sexual Compulsion Problems

In some cases like alcohol, over eating, or pornography unplugging can be objectively negative, but in other areas like watching a show or social media it can be more gray and neutral. Whatever the form of "unplugging," we need to understand that these activities, even the neutral ones, are competing to shape the way we see and interact.

Chapter 6 : How to Stop Looking at Pornography: 10 Steps (with Pictures)

The 24 hours from sundown March 3rd until sundown March 4th, is The National Day of racedaydvl.com day is designed to help people of all ages to embrace the ancient ritual of a day of rest and we are so excited that Screenagers is a co-sponsor!

Chapter 7 : Family Strong Blog â€” Jeffrey Dean Ministries

DOWNLOAD PDF UNPLUGGING PORNOGRAPHY

Introduction NoFap® is a moderated community-centered website that hosts challenges in which users ("Fapstronauts") abstain from pornography and masturbation for a period of time ("rebooting"). This is NoFap's subreddit.

Chapter 8 : Parents: Plug in by Unplugging | Net Nanny

While looking at pornography can sometimes have positive consequences, it can also become an unhealthy addiction. If pornography is negatively impacting your life, then you may be thinking about ways to cut back. If you want to stop looking at pornography, then there are several strategies you can.
